#### How To Use Your Study Pack

#### GCSE Command Words

Command Word	Definition	Example Question	Example Answer
State, give, name, write down	Short answer only and does not require an explanation.	<b>State</b> the units for acceleration.	m/s <sup>2</sup>
Describe (not graphs or practical)	Recall facts, events or process in an accurate way.	Describe how quadrats should be used to estimate the number of plants in a field.	Place a large number of quadrats randomly in the field. Count the number of plants in the quadrat. Calculate the mean number in each quadrat then use the area of the quadrat and field to estimate the number of plants.
Describe (graphs)	Identify the pattern in the graph and use numbers from the graph to make this clear.	Describe the pattern of tooth decay in Figure 3 for water without fluoride.	The percentage of tooth decay increases with age by 4% for each age group in figure 3.
Describe (practical)/ Plan	Write the method for the practical or the results that you would expect to see.	Plan an experiment to test the hypothesis "the higher the temperature, the faster the rate of reaction".	Measure the rate of reaction by adding a set amount of metal to set type, volume and concentration of acid and time how long it takes to stop fizzing. Repeat the experiment at 5 different temperatures.
Determine	Use given data or information to obtain and answer.	Determine the half-life of a sample if it decreases from 1000g to 250g in 2.6million years.	1.3 million years
Explain	Make something clear or state the reasons for something happening. You will need to state what is happening and then say why it happens.	<b>Explain</b> why soot forms.	Soot forms during incomplete combustion when not enough oxygen is present.
Evaluate	Use the information supplied and your own knowledge to consider the evidence for and against a point. You may also be required to include a justified conclusion.	A company stated: 'A Life Cycle Assessment shows that using plastic bags has less environmental impact than using paper bags'. <b>Evaluate</b> this statement.	Paper bags are made from a renewable resource whereas plastic bags are made from finite resources.  However paper bags are bad because they produce much more solid waste and more CO2 is released when they are produced therefore the negative impacts of paper bags outweigh the problem of plastic coming from a finite resource.
Compare	Describe the similarities and/or differences between things. Avoid writing about just one.	Compare the differences between cracking and distillation.	Cracking involves a catalyst whereas distillation does not.
Sketch	Draw approximately.	Sketch a current– potential difference graph for a filament lamp.	1 /

## **Forces Keywords**

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

				Forces		
Book Ref.	Spec. Ref.		Scalar/Ve	ector and Conta	ct/Non Contact	forces
	CS 6.5.1.1 6.5.1.2	1. State the	e difference be	etween a scalai	r and vector quo	antity.
	Triple 4.5.1.1 4.5.1.2	Give exc Scalars		ars and vectors.	Vectors	
			r quantity may ws represent.	be presented b	by an arrow. Expl	ain what the features of
				vo objects can be the difference.	pe categorised c	as a contact or non-
			examples of co	ntact and non-	contact forces. Non-contact fo	orce
				D	111	
				hich quantities are	ve It! e scalars and which s been completed f	h quantities are vectors.
			Quantity	Scalar	Vector	
		1	Momentum		<b>✓</b>	
		1	Acceleration			
		[	Distance			
		F	orce			
		1	īme			(3)

		Forces
Book Ref.	Spec. Ref.	Gravity
	CS 6.5.1.3	<ol> <li>State the equation which links the weight of an object to its mass and the gravitational field strength. Give the units.</li> </ol>
	Triple 4.5.1.3 MS3a,3c	<ol> <li>The gravitational field strength near the Earth's surface is 9.81 N/kg. Calculate the weight of a 5kg object. Give the units.</li> </ol>
		<ol> <li>An object on Earth is hung from a calibrated spring-balance (a newton meter). The meter shows a reading of 120N. Calculate the mass of the object.</li> </ol>
		4. This equation can be interpreted as "The weight of an object is directly proportional to the mass of object". Explain with a numerical example how changing the mass will affect weight. What is the symbol used to represent direct proportionality?
		<ol> <li>Describe how the gravitational field strength at a point depends on the distance from the object.</li> </ol>
		6. Define the term centre of mass.
		Prove It!
		Every object has a centre of mass. What is meant by the centre of mass?
		The child has a weight of 343 N. Gravitational field strength = 9.8 N / kg
		Write down the equation which links gravitational field strength, mass and weight.
		Calculate the mass of the child.
		Mass = kg (3)

		Forces		
Book	Spec.			
Ref.	Ref.	Resultant force		
	CS 6.5.1.4 Triple 4.5.1.4	1. For both situations shown below give the magnitude and direction of the resultant force.  60N  10N  30N		
		2. Describe the purpose of resultant force.		
		3. In each case draw and label the forces acting on the object.  A stationary book on a table  A ball falling down. It's accelerating downwards.		
		A shark swimming to the left at constant speed.  A car moving to the right but decelerating because the breaks are applied.		
		Prove It!		
		Draw a ring around the correct answer in the box to complete each sentence.		
		The BASE jumper accelerates forwards when force A is equal to bigger than smaller than		
		The BASE jumper falls with a constant speed when force C is equal to bigger than (2)		

		Forces
Book Ref.	Spec. Ref.	Resolving forces
Kei.	CS 6.5.1.4	In the diagram below, add two arrows in order to resolve the force into two components, horizontal and vertical.
	Triple 4.5.1.4 (HT only)	<ol> <li>The diagrams below show weight acting on the same object on two different</li> </ol>
	MS5b	slopes. Add two arrows to each diagram to resolve the force into two components. One parallel to the slope and other perpendicular.
		<ul> <li>3. Which object will accelerate down the slope quickest? Use your answer to question 2 to explain your answer.</li> <li>4. In each case below draw add the forces using a parallelogram. Label the resultant force with its length. The diagrams are drawn to scale.</li> </ul>
		Prove It!
		Add to Diagram 2 to show the single force that has the same effect as the two 300 N forces. Determine the value of this resultant force. Diagram 2 is drawn to scale.  Diagram 2  300 N
		Resultant force = N

		Forces		
Book Ref.	Spec. Ref.	Work Done and Energy Transferred		
	CS 6.5.2	1. Define the term 'work done'.		
	Triple 4.5.2	<ol> <li>State the equation that links work done, force and distance. State the units for each.</li> </ol>		
	W\$4.5	3. What is 1 Joule equal to in newton-metres?		
		4. If 2000J of work is done, how much energy is transferred?		
		5. What will happen to the temperature of an object when work is done against frictional forces?		
	MCO1- 0 -	AA		
	MS3b,3c	Maths Skills  1. A child drags a tyre 5m over the ground. He pulls with the resultant force of 340N in the direction of motion. Calculate the work done.		
		A brick is pushed 1.4m along rough ground with a total force of 45N. Find the total energy transferred?		
		Prove It		
		The climber weighs 660 N.  (i) Calculate the work the climber must do against gravity, to climb to the top of the cliff.		
		Work done =		
		(ii) It takes the climber 800 seconds to climb to the top of the cliff.  During this time the energy transferred to the climber equals the work done by the climber.		
		Calculate the power of the climber during the climb.		
		Power = W (2)		

		Forces
Book Ref.	Spec. Ref.	Forces and Elasticity
KCI.	CS 6.5.3	Add arrows to show the force acting on the objects as they are compressed, stretched and bent
	Triple 4.5.3 MS3 MS3c	
		compressed stretched bent
		2. Explain why more than one force is required to change the shape of an object.
		3. State Hooke's law.
		4. What is meant by the term limit of proportionality?
		<ol> <li>State Hooke's law as an equation, explain what each variable represents and give the units.</li> </ol>
		A spring with an elastic constant of 4N/m is compressed by 0.3m. Calculate the force required to this.
		<ol> <li>A rubber strip which has an original length of 10cm is stretched to 15cm when 12N of weight is hanged from it. Calculate the spring constant in N/m.</li> </ol>
		8. Use the diagram below to explain the difference between elastic and inelastic deformation.

		Forces
Book Ref.	Spec. Ref.	CS: RPA19 Triple: RPA6
	CS	Required Practical: Investigate the relationship between force and extension for a
Kei.		
		(2)

	Forces			
Spec. Ref.	Distance, displacement, speed and velocity			
CS 6.5.6.1.1 6.5.6.1.2 6.5.6.1.3	<ol> <li>Define displacement.</li> <li>State the equation, with units, that links speed, distance and time.</li> </ol>			
Triple 4.5.6.1.1 4.5.6.1.2 4.5.6.1.3	3. Match the columns  Distance Displacement Speed Velocity  4. Estimate the typical speeds for the following in m/s.  Walking: Running: Cycling: Speed of sound:			
	Prove It!  Train route  Town B  Scale 1 cm represents 5 km  determine the displacement of the train in travelling from A to B.  Show how you obtain your answer.			
	Displacement = km  Direction = (2)			
MS2f,3b, 3c	Maths Skills  1. A car travels 250m in 14 seconds. Calculate the speed of car with units.			
	2. A train moves at a constant speed of 27m/s. Calculate the distance it travels in 120 seconds.  2. A server seed 20 of a feet at least of the distance it travels.			
	<ul> <li>3. A car moves at 30m/s for an hour. Calculate the distance it travels.</li> <li>4. A person initially runs along a track at 1.0 m/s for 20m and then speed up to 3.0 m/s for the remaining 30m. Calculate the average speed.</li> </ul>			
	CS 6.5.6.1.1 6.5.6.1.2 6.5.6.1.3 Triple 4.5.6.1.1 4.5.6.1.2 4.5.6.1.3			

		Forces					
Book Ref.	Spec. Ref.	Distance-time relationship					
KCI.	CS	1. Sketch the gr	aph to show the motio	n of the following obje	ects		
	6.5.6.1.4	Stationary	Constant speed	Accelerating	Decelerating		
	Triple 4.5.6.1.4	distance/m	distance/m	distance/m	distance/m

Book Ref.	Spec. Ref.	Newton's First Law
	CS 6.5.6.2.1 Triple 4.5.6.2.1	$ \begin{array}{c} \uparrow^{2N} \\ \downarrow^{5N} \\ \downarrow^{2N} \end{array} $
		State the resultant force on the object.
		2. The box is initially stationary. Describe what will happen to the object next.
		Driving force Resistive force
		<ol> <li>Explain why the velocity of the car constant even though there are two force acting on it.</li> </ol>
		4. <b>HT only</b> Define the term Inertia
		Prove It!
		The diagram shows an aircraft and the horizontal forces acting on it as it moves along a runway. The resultant force on the aircraft is zero.  (i) What is meant by the term resultant force?
		(1)
		(ii) Describe the movement of the aircraft when the resultant force is zero.
		(1)

Forces

		Forces
Book Ref.	Spec. Ref.	Newton's 2 <sup>nd</sup> law
Kei.	CS 6.5.6.2.2	State the equation for Newton's second Law, include units.
	Triple 4.5.6.2.2	2. State Newton's second law in words.
	MS3a	<ol><li>The mass of the car above is 1200 kg. Calculate the acceleration of the cart.</li></ol>
		3 000 N — 10 000 N
		4. <b>HT only</b> Define inertial mass
		<ol><li>HT only Explain what affect inertial mass has on the ability to change the speed of an object.</li></ol>
		6. Acceleration of a sprinter $\sim$ 8m/s². State what the symbol $\sim$ means.
		<ol> <li>Large Trucks weigh approximately 38 000kg. Calculate the resultant force required to accelerate at the same rate as the car above.</li> </ol>
		<b>Maths Skill</b> Equation 1: acceleration $\propto$ Force Equation 2: acceleration $\propto \frac{1}{mass}$ 1. Explain what equation 1 means in words and describe what will happen to the acceleration if the force is doubled.
		<ol> <li>Explain what equation 2 means in words and describe what will happen to acceleration if the mass is doubled.</li> </ol>
		Prove It!
		The aircraft has a take-off mass of 320 000 kg. Each of the 4 engines can produce a maximum force of 240 kN.  Calculate the maximum acceleration of the aircraft.
		Show clearly how you work out your answer and give the unit.
		Acceleration =(3)

		Forces		
Book	Spec.	CS: RPA19		
Ref.	Ref.	Triple: RPA7		
	CS 6.5.6.2.2	Required Practical  Investigate the effect of varying the force on the acceleration of an object of		
	0.0.0.2.2	constant ass, and the effect of varying the mass of an object on the		
	<b>-</b> · ·	acceleration produced by a constant force.

		Force (N)		
		Describe how the set up shown above can be used to produce the		
		graph.		
		2. Explain how this graph is evidence for Newton's second law.		
		3. The accuracy of this experiment is reduced by friction between the		
		table and the cart. Is this a random or systematic error, explain your		
		answer.		
		4. This experiment can be done with a person using a stop watch to time		
		the cart.		
		However the results will be less accurate explain why.		
		Using the stop watch will also be less precise explain why.		

		Forces	
Book Ref.	Spec. Ref.	Newton's 3 <sup>rd</sup> law	
	CS 6.5.6.2.3	1. State Newton's 3 <sup>rd</sup> Law.	
	Triple 4.5.6.2.3	2. In each case describe the Newton's 3 <sup>rd</sup> law pair. The first one done for you.	e has been
	4.0.0.2.0	The state of the s	Time :
		The man pulls the spring on the spring. The spring pulls on the man with an equal and opposite force.	
		Prove It!	
		Dummy Strong barrier  Box 2	
		(i) Draw an arrow in Box 1 to show the direction of the force that the car exerts on the barrier.	(1)
		(ii) Draw an arrow in Box 2 to show the direction of the force that the barrier exerts on the car.	(1)
		(iii) Complete the following by drawing a ring around the correct line in the box.	767
		The car exerts a force of 5000 N on the barrier. The barrier does not move. The force	
		exerted by the barrier on the car will be equal to 5000 N.	
		less than	(1)

		Forces
Book Ref.	Spec. Ref.	Stopping distance
No.	CS 6.5.6.3.1 6.5.6.3.2 6.5.6.3.3 6.5.6.3.4	<ol> <li>A driver attempts an emergency stop. The distance travelled from spotting the hazard to completely stopping the car can be is called the stopping distance. Name and define the two distances which make up stopping distance.</li> </ol>
	Triple 4.5.6.3.1 4.5.6.3.2	<ol><li>Write the equation which links thinking distance, speed and reaction time and give units.</li></ol>
	4.5.6.3.3 4.5.6.3.4	<ol> <li>What is the typical reaction time of a person? Describe and explain 3 factors which can affect this.</li> </ol>
		<ol> <li>Describe an experiment which can be used to investigate the reaction time of students.</li> </ol>
		<ol> <li>Describe and explain how adverse road conditions and vehicle condition affects braking distance.</li> </ol>
		6. <b>Physics only</b> .The stopping distance of a typical car at 30mph is 23m. Estimate the stopping distance of the same car at 60mph.
		Prove It!
	MS 1d	Draw straight lines to match each chart to the correct conditions.  Draw only <b>three</b> lines.
		Conditions Charts
		Speed = 22 m/s driver wide awake  Key  Thinking distance  □ Braking distance
		Speed = 13 m/s driver wide awake
		Speed = 13 m/s driver very tired
		The three charts above all apply to dry road conditions. How would the braking distances be different if the road were wet?
		(1)

	Forces					
Book Ref.	Spec. Ref.					
	HT only CS 6.5.7.1	State the equation which links momentum, mass and velocity				
	6.5.7.2	2. State the law of conservation of momentum.				
	Triple 4.5.7.1 4.5.7.2	3. The total momentum before the explosion is zero. With reference to the velocity of the canon gun and ball, explain why how momentum the diagram shows that momentum after is also zero.				
		before  The state of the state				
		after • • • • • • • • • • • • • • • • • • •				
		Prove It!  The figure below shows a skateboarder jumping forwards off his skateboard.  The skateboard is stationary at the moment the skateboarder jumps.  The skateboard moves backwards as the skateboarder jumps forwards.  Explain, using the idea of momentum, why the skateboard moves backwards.				
		(3)				

## **Electricity and Magnetism**

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

			Elec	etricity
Book Ref.	Spec. Ref.	Circuit symbols and current		
	CS	1. Complete th	ne table	
	6.2.1.1 6.2.1.2	Symbol	Name	Function/Description
	Triple		Open switch

		$\overline{}$		
				Turns electrical energy into light.
			Fuse	
				Measure the current though components which are in series with it.
			Thermistor	
		<del>-</del>		
		2. State the eq	uation which link	s current, charge and time. Give the units.
		3. In words, wh	at does the term	electrical current mean?
		4. Calculate th	e current when 1	2.0 C of charge flows past a point in 20 seconds.
		5. Calculate h	ow much charge	will flow if a 20 mA current flows for 5 minutes.

		Electricity			
Book Ref.	Spec. Ref.	Current, resistance and potential difference			
	CS 6.2.1.3	Describe the effect increasing the resistance in circuit has on the current through it.			
	Triple 4.2.1.3 MS2a	2. The potential difference across a circuit component can be increased by adding more cells. What effect will this have on the current through the component?			
	MS3b MS3c WS3.3	<ol> <li>State the equation which link potential difference, charge and work done (energy transferred). Give the units</li> </ol>			
	***************************************	<ol> <li>A 25V power supply is connected to a bulb. In the time it was on, 25C of charge flowed through the bulb. Calculate the energy transferred.</li> </ol>			
		<ol> <li>State the equation which links current, potential difference and resistance.</li> <li>Give the units.</li> </ol>			
		<ol> <li>Calculate the resistance of a bulb with 0.6A flowing through it and a potential difference of 25V across it. Give your answer to 2sf with units.</li> </ol>			
		Prove It!			
		The lamp is now included in a circuit. The circuit is switched on for 2 minutes. During this time, 72 coulombs of charge pass through the lamp.			
		calculate the energy transformed by the lamp while the circuit is switched on.			
		Energy transformed =			
		Calculate the resistance of the lamp.			
		Resistance = $\Omega$ (2)			

		Electricity
Book Ref.	Spec. Ref.	CS: RPA15 Triple: RPA3
NCI.	CS	Required Practical: Use circuit diagrams to set up and check appropriate circuits
	6.2.1.3	to investigate the factors affecting the resistance of electrical circuits.
	<b>-</b> · ·	Add two components to the circuit diagram below which will allow the
	Triple 4.2.1.3	resistance of the wire to be determined.
	4.2.1.0	
	WS2.2	
	WS3.7	
		Wire
		To investigate what affect the length of the wire has on its resistance describe the graph you will need to plot. Explain what goes on each axis
		and how these numbers are obtained.
		and now mose nombers are obtained.
		x-axis :
		y-axis:
		3. Name three other variables which need to be controlled.
		4. A student said they got an anomaly, what did they mean?
		Prove It!
		The diagram shows a strain gauge, which is an electrical device used to monitor a changing
		force. Applying a force to the gauge causes it to stretch.  This makes the electrical resistance of the wire change.
		A CONTROL OF A CONTROL OF CONTROL
		Flexible plastic
		Thin wire Connecting wire
		Considering wife
		Using the correct symbols, add to the diagram to show how a battery, an ammeter
		and a voltmeter can be used to find the resistance of the strain gauge drawn above. (2)
		Before any force is applied, the unstretched gauge, correctly connected to a 3.0 V battery, has a current of 0.040 A flowing through it. Calculate the resistance of the unstretched gauge.
		(2)
		Resistance =Ω
		Stretching the gauge causes the current flowing through the gauge to decrease.
		What happens to the resistance of the gauge when it is stretched?
		(1)

		Electricity					
Book Ref.	Spec. Ref.	Power and Energy Transfers					
	CS 6.2.4.1 6.2.4.2	1. State the equation which links Power to energy and time. Give the units.					
		2. State the equation which links Power to current and voltage. Give the units.					
	Triple 4.2.4.1 4.2.4.2	3. State the equation which links power to current and resistance. Give the units.					
	MS2a MS3b MS3c	<ol> <li>A bulb transfers 70,000J of energy in 1hour. Calculate the power of the bulb with units.</li> </ol>					
		<ol> <li>A heater with a power rating of 1000W is connected to the UK mains supply. Calculated the current through the heater to 3sf. Give the units.</li> </ol>					
		6. Calculate the power of a fan with current of 1.2A flowing through it and $500\Omega$ resistance.					
		<ul> <li>7. Describe 3 ways in which the total energy transferred by the bulb shown can be increased.</li> <li>1.6V</li> <li>0.5 A</li> <li>8. Describe the energy transfer in a heater connected to the mains supply.</li> </ul>					
		<ul><li>8. Describe the energy transfer in a heater connected to the mains supply.</li><li>9. Describe the energy transfer in an electric motor which is powered by a battery.</li></ul>					
		Prove It!					
		The charge that flows through the new shower in 300 seconds is 18 000 C.  The new electric shower has a power of 13.8 kW.  Calculate the resistance of the heating element in the new shower.  Write down any equations you use.					
		Resistance =Ω					

		Electricity
Book Ref.	Spec. Ref.	National grid
	CS 6.2.4.3	Label the parts of the national grid.
	Triple 4.2.4.3	Power Station Consumer
		The voltage produced at the power station is approximately 25,000V. Explain why a step up transformer is used to increase the voltage.
		3. Explain why it is necessary to decrease the voltage before it goes to people's houses.
		Prove It!
		Electricity is distributed from power stations to consumers along the National Grid.  The voltage across the overhead cables of the National Grid needs to be much higher than the output voltage from the power station generators.  Explain why.
		(3)

		Electricity
Book Ref.	Spec. Ref.	Magnetic fields
RCI.	CS 6.7.1.1 6.7.1.2 Triple 4.7.1.1 4.7.1.2	Draw the magnetic fields around this magnet.      N  S
		<ol> <li>Where in your diagram is the magnetic field the strongest? What happens to the strength of the field you increase the distance from the magnet?</li> <li>Describe what would happen if a second north pole was placed near the north pole above.</li> <li>Describe what would happen if the north pole was placed near the south pole? Explain the direction of the arrows on your magnetic field.</li> </ol>
		<ol> <li>Describe the difference between a permanent magnet and an induced magnet.</li> </ol>
		6. List 4 different magnetic materials.
		7. The north pole of a bar magnet is pointed at a block of magnetic material.  The bar magnet is rotated so the south pole faces the block of magnetic material. Describe what happens in each case.
		8. What creates the magnetic field around the earth? Describe and explain the behaviour of a magnetic compass as it moves around the earth.

		Electricity
Book Ref.	Spec. Ref.	Electromagnetism
	CS 6.7.2.1	<ol> <li>Current flowing through a wire produces a magnetic field around itself. Draw the magnetic field on the diagram below. Explain how the strength of the magnetic field depends on distance.</li> </ol>

## **Waves Keywords**

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

		Waves
Book Ref.	Spec. Ref.	Transverse and Longitudinal Waves
NO.	CS 6.6.1.1 Triple 4.6.1.1	<ol> <li>Label the diagrams below as either transverse or longitudinal.         — Wavelength — Wavelength</li></ol>
		Prove It!  Waves may be either longitudinal or transverse.  (a) Describe the difference between a longitudinal and a transverse wave.
		(1)

		Waves
Book Ref.	Spec. Ref.	Properties of Waves
NO.	CS 6.6.1.2	Label the amplitude and the wavelength on the wave below:
	Triple 4.6.1.2	
		2. Define the term 'frequency'.
		3. What is the equation to calculate a period? Give the units of each component.
		4. What is the equation that links frequency, wavelength and wave speed? Give the units for each component.
		5. Outline a method to measure the speed of sound in air.
	MS1a MS1b MS3b MS3c	Maths Skills  1. The frequency of an ocean wave is measured as 0.2Hz. Calculate the period of this wave. Include units with your answer and give it to an appropriate number of significant figures.
		2. A wave has a frequency of 4.0 x 107 Hz and a speed of 3.0 x 108 m/s. Find its wavelength. Give your answer in decimal form.
		3. The wavelength of a wave is 1.2m and exactly 2 complete waves are produced per second. Calculate the speed of the wave. Give your answer to an appropriate number of significant figures.

		Waves
Book Ref.	Spec. Ref.	RPA8 (triple), RPA 20 (CS)  Make observations to identify the suitability of apparatus to measure the frequency, wavelength and speed of waves in a ripple tank and waves in a solid and take appropriate measurements.
	CS 6.6.1.2	Describe how a ripple tank can be set up to measure the speed of a wave.     Include any measurements you will need to take and any calculations you will need to do.
	Triple 4.6.1.2	
	AT4	
	W\$2.2 W\$2.3 W\$2.6 W\$3.4 W\$3.8	
		Explain why the waves appear not to move when you reach a certain frequency.
		3. A student conducted an experiment and she noticed the shadow lines were very close together which was making it very hard to measure the wavelength. How could she improve her results? Why would they be better?
		<ol> <li>A different student wanted to measure the speed of waves through a solid.         Outline an experiment they could do to obtain these results.</li> </ol>
		5. All results contain uncertainty. What does this mean?

		Waves
Book Ref.	Spec. Ref.	Properties of Electromagnetic Waves
KCI.	CS 6.6.2.2 (HT only)	Draw a ray diagram to show the refraction of a wave at the boundary between two different media – air and a glass block.
	Triple 4.6.2.2 (HT only)	<ol> <li>HT only - A wave is travelling between substance A and substance B. The wave travels at the same speed in both substances. Would refraction occur? Explain your answer.</li> </ol>
		3. HT only - This is a wave front diagram. Use this diagram to explain what is happening to the wavelength as it travels from air to glass. Note the frequency does not change.
		4. Explain why this diagram <b>does not</b> show refraction.
		Prove It! <b>HT only</b> -
		The diagram below shows a beam of light striking a perspex block.
		wavefronts  B  B
		(i) Continue the paths of the rays AB and CD inside the perspex block.
		(ii) Draw the wavefronts of the beam of light in the perspex.
		(iii) Explain why the beam behaves in the way you have shown.

		Waves
Book	Spec.	RPA10 (triple), RPA 21 (CS)
Ref.	Ref.	Investigate how the amount of infrared radiation absorbed or radiated by a surface depends on the nature of that surface.
	CS	A student set up the equipment below to find out the amount of infrared radiation
	6.6.2.2	absorbed by 3 different surfaces:
		ĸ
	Trivala	Î Van intin
	Triple 4.6.2.2	Matt white
	4.0.2.2	
		Shiny silver Matt Black
		Heater
	WS2.1	Suggest a hypothesis for this investigation.
	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	30ggest a ttypethesis for this investigation.
	WS2.2	
	VV3Z.Z	What measurements would the students need to take for this investigation?
		3. Outline the control variables for this experiment and why control variables are
		necessary.
	WS3.7	
	1100.7	
		4. A second student did this experiment but replaced the thermometer with a
		temperature sensor connected to a computer. What was the advantage of this?
		5. Although the second student used different equipment they still obtained very similar
		results to the first student. Would these results be considered repeatable or
		reproducible? Explain the difference.

	1	Waves
Book Ref.	Spec. Ref.	Properties of Electromagnetic Waves
	CS 6.6.2.3	HT only - How are radio waves produced?
	Triple 4.6.2.3	2. <b>HT only</b> - Explain how radio waves can induce oscillations in an electrical circuit.
	WS1.5	3. Explain how gamma rays originate from the nucleus of an atom.
		4. What is radiation dose measured in and state the three most dangerous types of electromagnetic radiation. What are the risks of using electromagnetic radiation?
		5. Explain the term ionising with respect to gamma and X-rays.
		Prove It!
		Some types of food are treated with <i>gamma</i> radiation. Low doses of radiation slow down the ripening of fresh fruit and vegetables while higher doses of radiation kill the bacteria that make the food go off.  (a) (i) What is <i>gamma</i> radiation?
		(ii) Food packed in crates or boxes can be treated using this method.  Why must a source that emits gamma radiation be used?
		(1)
		(iii) A suitable source of gamma radiation is the isotope caesium 137.  Complete the following sentence by choosing the correct word from the box.
		electrons neutrons protons
		An atom of caesium 137 has two more than an atom of caesium 135.

			Waves	
Book Ref.	Spec. Ref.		Uses and Applications o	f Electromagnetic Waves

		X-ray		
		Gamma ray		

## **Energy Keywords**

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

	Energy				
Book Ref.	Spec. Ref.	Energy Stores and Systems			
	CS 6.1.1.1	Complete the table to summarise the types of energy stores and an explanatio     Complete the table to summarise the types of energy stores and an explanatio     Complete the table to summarise the types of energy stores and an explanatio     Complete the table to summarise the types of energy stores and an explanatio	n:		
		Kinetic  Anything moving has energy in its kinetic energy store e.g. a co	ar.		
	Triple 4.1.1.1				
		Electrostatic			
		Nuclear			
		Thermal			
		2. A system is an object or group of objects. What is a closed system?			
		Describe the changes in stored energy that occur in			
		a) An electric kettle boiling water.			
		b) A car braking and coming to a stop			
		b) A car braking and coming to a stop.			
		c) A tennis ball hitting a racket.			
		Prove It!			
		The student jumps off the bridge.			
		Complete the sentences to describe the energy transfers.			
		Use answers from the box.			
		elastic potential gravitational potential kinetic sound thermal			
		g			
		Before the student jumps from the bridge he has a store of			
		energy.			
		When he is falling, the student's store of			
		energy increases.			
		When the bungee cord is stretched, the cord stores energy as			
		energy.			
			(3)		

		Energy
Book Ref.	Spec. Ref.	Changes in Energy
	CS 6.1.1.2 Triple	1. State the equation that links kinetic energy, mass and velocity. Give units for each.
	4.1.1.2	2. The equation to calculate elastic potential energy is:
	W\$4.3	elastic potential energy = 0.5 × spring constant × (extension) <sup>2</sup> $E_e = \frac{1}{2} k e^2$
		State the units for each of the variables in the equation.
		3. State the equation that links gravitational potential energy, height, gravitational field strength and mass. Give units for each.
		<ul> <li>4. From the equations above, which would you use to calculate</li> <li>a) Energy of a moving object?</li> <li>b) Energy of an object raised off the ground?</li> <li>c) Energy stored in a stretched spring?</li> <li>5. In a closed system, if a raised object had 20,000J of gravitational potential energy</li> </ul>
		stored before it was dropped, how much kinetic energy would it have when it was dropped? What is the law called?
	MS1b MS2a MS3b MS3c	Maths Skills  1. A van of mass 2450kg is travelling at 40.0m/s. Calculate the energy in its kinetic energy store. Give your answer in standard form.
		2. A moped with 1.17 x 10 <sup>4</sup> J of energy in its kinetic energy store travels at 12.0m/s. What is the mass of the moped? Give your answer to an appropriate number of significant figures.
		3. A 50kg mass is raised through a height of 6m. Find the energy transferred to its gravitational potential energy store. The gravitation field strength is 9.8N/kg on Earth.
		4. A flea of mass 1.0 x 10 <sup>-3</sup> g jumps vertically from the ground. At the top of the jump the flea has gained 1.96x10 <sup>-6</sup> J of energy in its g.p.e store. How high has the flea jumped?
		5. The flea from Q5 falls from the top of the jump. Assuming there is no air resistance, calculate the speed of the flea when it hits the ground. Give your answer to 2 significant figures.

		Energy	
Book Ref.	Spec. Ref.	Energy Changes in Systems	
RCI.	CS 6.1.1.3 Triple	What is the equation that links specific heat capacity, mass, change in energy and temperature change? Give units for each.	thermal
	4.1.1.3	2. What is the definition of specific heat capacity?	
		Prove It!	
		A 'can-chiller' is used to make a can of drink colder.	
		Figure 1 shows a can-chiller.	
		Figure 1	
		Can of drink	
		(a) The can-chiller decreases the temperature of the liquid in the can by 15 °C. The mass of liquid is 0.33 kg. The specific heat capacity of the liquid is 4200 J / kg °C. Calculate the energy transferred from the liquid as it cools.	
		Energy = J	(2)
		(b) Complete the following sentence.	
		The specific heat capacity of a substance is the amount of energy required to	
		change the of one kilogram of the	
		substance by one degree Celsius.	(1)
	MS3b	Maths Skills  1. Water has a specific heat capacity of 4200J/kg°C. How much energy in to heat 2.00kg of water from 10°C to 100°?	s needed

		Energy
Book	Spec.	RPA1 (triple) RPA14 (CS)
Ref.	Ref.	Investigation to determine the specific heat capacity of one or more materials. The
		investigation will involve linking the decrease of one energy store to the increase in
		temperature and subsequent increase in thermal energy stored.
	CS	1. A student set up the apparatus below:
	6.1.1.3	Incident solar
	0.1.1.0	radiation
	Triple	radiation
	4.1.1.3	
	4.1.1.0	
	AT1,5	Transparent lid
	WS2.7	
	W32.7 MS3a	Thermometer——
	MS4d	Wester
	7V134CI	Insulation Water
		She wanted to calculate the thermal energy change over an hour. She knew the
		specific heat capacity of water is 4200J/kg°C. What other measurements would she
		need to take?
		2. Why would this calculation not give her an exact value for the thermal energy
		from the Sun? How could she improve her experiment?
		3. As mass and and specific heat capacity are constants. The results should show
		that energy transferred is directly proportional to change in temperature. What
		does that mean? What is the symbol used to show to variables are directly
		proportional?
		proportionary
		4. The graph below shows the energy transferred as 2 materials are heated:
		100
		80
		Temperature (°C)
		2 60
		on the second of
		₩ 40 ×
		Water
		20 Water
		0 50 100 150 200
		Heat Added (Joules)
		776 501 (CO) 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
		Calculate the gradient of the line for water. What is the intercept?

			E	nergy		
Book Ref.	Spec. Ref.			Power		
	CS 6.1.1.4	1. What is the	definition of power	er?		
	Triple 4.1.1.4	2. What is the	equation that link	s power, energy t	ransferred and tir	me? Give units.
	MS3b MS3c	3. What is the	equation that link	s power, work dor	ne and time? Giv	e units.
		4. What can y	ou infer from the	2 equations about	t energy transferre	ed and work done?
		5. What is 1 W	att in Joules/seco	nd?		
		completed	the same race b	ry way except the ut the car with the of energy transfer	more powerful e	ngines. They energy crossed the

		Ose the illiviilled	on given in the table.			(2)

		Energy
Book Ref.	Spec. Ref.	Energy Transfers in a System
	CS 6.1.2.1	Complete the sentence:     Energy cannot be or
	Triple 4.1.2.1	2. What does the term dissipated mean? Give an example.
		3. What type of energy is most likely to be dissipated?
		4. What happens to the surroundings when energy is dissipated?
		<ul><li>5. Name the energy transfers taking place in</li><li>a) A hairdryer.</li><li>b) A mobile phone.</li><li>c) A compressed spring</li></ul>
		6. A student oiled the gears on his bike. What is the name of this process? Explain how this reduced unwanted energy transfers.
		7. A metal spoon has higher thermal conductivity than a wooden spoon. What does this mean?
		8. When designing a house, builders consider the thickness of the walls and the thermal conductivity of the materials used to build the walls. Explain why.
		9. What other design features are built into houses to minimise unwanted energy transfers?
		Prove It!
		Which two of the following statements are true?
		Tick (✓) two boxes.
		Appliances only transfer part of the energy usefully.
		The energy transferred by appliances will be destroyed.
		The energy transferred by appliances makes the surroundings warmer.
		The energy output from an appliance is bigger than the energy input.

		Energy
Book Ref.	Spec. Ref.	Efficiency
	CS 6.1.2.2	<ol> <li>State the equation that links useful output energy transfer, efficiency and total input energy transfer.</li> </ol>
	Triple 4.1.2.2	2. What is the unit of energy transfer?
	MS1c	3. Why does efficiency have no units?
		4. If you wanted to express efficiency as a percentage, what would you have to do to your answer?
		<ol> <li>As well as using energy transfer, efficiency can be measured using another variable. Name that variable.</li> </ol>
		<ol> <li>HT only – Look at the old car below and explain how the design of cars has changed to improve their efficiency.</li> </ol>
	M\$1a	Maths Skills
	MS3b MS3c	<ol> <li>A motor is supplied with 250W of power and outputs 120W of useful power. What is the efficiency of the motor? Give your answer as a decimal.</li> </ol>
		2. A lamp with an efficiency of 74% is supplied with 350J of energy. How much energy is usefully transferred by the lamp?
		Prove It!
		The total power input to a pumped storage power station is 600 MW.
		The useful power output is 540 MW.
		(i) Calculate the efficiency of this pumped storage power station.
		Efficiency =(2)
		When the total power input to the motor was 5 W the motor could not lift the 2.5 N weight.
		State the efficiency of the motor.
		Efficiency = % (1)

		Energy
Book Ref.	Spec. Ref.	National and Global Energy Resources
Kei.	CS	What are the 3 types of fossil fuel?
	6.1.3	2. Name 8 other sources of energy.
	Triple	Zi Name d'amer societé d'amergy.
	4.1.3	
	W\$1.3 W\$1.4	3. What is the definition of a renewable resource?
	WS1.4	4. Identify each of the sources in Q2 as renewable (R) or finite (F).
		5. Which of the energy resources are the least reliable? Why?
		Which of the energy resources have the biggest environmental impact? Outline what these environmental impacts are.
		7. If scientists know about the negative impacts to the environment of using some of these energy resources, why hasn't everyone stopped using them?
		8. Some people don't believe that burning fossil fuels contributes to global warming. Explain why peer review of scientists work is very important.
		Prove It!
		Information about the two electricity generation systems is given in Figure 2.
		Figure 2
		The wind turbine costs £50 000 to buy and install.
		The hydroelectric generator costs £20 000 to buy and install.
		The average power output from the wind turbine is 10 kW.
		The hydroelectric generator will produce a constant power output of 8 kW.
		Compare the advantages and disadvantages of the two methods of generating electricity.
		Use your knowledge of energy sources as well as information from Figure 2.
		(6)

		Energy
Book Ref.	Spec. Ref.	Density
	CS 6.3.1.1 6.3.1.2 Triple 4.3.1.1 4.3.1.2	<ol> <li>State the equation for density with units.</li> <li>Calculate the mass of a block of wood with volume of 0.001 m³. The density of wood is typically 0.70 x 10³ kg/m³. Give the units.</li> </ol>
		3. Draw a particle diagram for each state of matter.
		3. Draw a particle diagram for each state of matter.  Solid Liquid Gas
		4. Describe how the density changes from solid to gas.
		<ol> <li>In terms of the arrangement of particles explain why one of these has significantly lower density.</li> </ol>
		Prove It!
		The information in the box is about the properties of solids and gases.
		Solids:  • have a fixed shape • are difficult to compress (to squash).  Gases: • will spread and fill the entire container • are easy to compress (to squash).  Use your knowledge of kinetic theory to explain the information given in the box.  You should consider:
		<ul> <li>the spacing between the particles</li> <li>the movement of individual particles</li> <li>the forces between the particles.</li> </ul>
		(Total 6 marks)

		Energy
Book Ref.	Spec. Ref.	CS: RPA17
Kei.	CS	Triple: RPA5  Required Practical: Determine the densities of regular and irregular solid objects and liquids.
	6.3.1.1 Triple 4.3.1.1	A 20.00ml sample of liquid is put into an empty beaker that had a mass of 31.44g. The breaker with the liquid was weighed at 55.89g. What is the mass of the liquid?
		2. Given 1ml = 1cm <sup>3</sup> , calculate the density of the liquid in g/cm <sup>3</sup> .
		<ol> <li>The length width and height of a rectangular cuboid is measured using a venire calliper. Length is 21.50cm, width is 5.03cm and height is 10.01cm. Given the mass of the cuboid is 800g. Calculate the density of the object in g/cm<sup>3</sup></li> </ol>
		4. The mass of the rock shown below is 100g. Calculate the density of the rock in g/cm <sup>3</sup>   Cm <sup>3</sup>   100- 90- 80- 70- 60- 50- 40- 30- 20- 10- 10- 10- 10- 10- 10- 10- 10- 10- 1

		Metal cube Small statue  © WhitehouneñStock/Thinkstock, © Marc Dietrich/Hemera/Thinkstock  Describe the methods that the student should use to calculate the densities of the two objects.
		(Total 6 marks)

		Energy
Book Ref.	Spec. Ref.	Internal energy and specific heat capacity
	CS 6.3.2.1 6.3.2.2	What is meant by the term internal energy?
	Triple	2. The diagram below shows what happens as ice is heated until it becomes steam.
	4.3.2.1 4.3.2.2	Temperature (°C)
		Time (minutes)
		For each example describe and explain the change in internal energy. a) C-D Water is heated from 0°C to 100°C
		b) B-C Ice is melted into water at 0°C.
		3. Define the term specific heat capacity.
		4. The increase in temperature can be determined using the following equation: $\Delta E = m \ c \ \Delta \theta$ . How much energy is needed to heat 0.2kg of oil from 10°C to 60°C. The heat capacity of oil is 2000J/kg°C.
		5. Define specific latent heat of fusion.
		6. Define specific latent het of vaporisation.
		7. When 0.15kg of a molten metal is allowed to solidify it released 75000J of energy. Using the equation $E=mL$ calculate the specific latent heat of fusion of metal. Give the units.
		8. Explain when specific heat capacity and specific latent heat are used.

		Energy
Book Ref.	Spec. Ref.	Particle motion in gases
RCI.	CS 6.3.3.1 Triple 4.3.3.1	1. The diagram below shows gas particles in a box. Describe their motion.  3. 0 0  4. 0 0  5. 0 0  6. 0 0  7. 0 0  8. 0 0  9.
		Describe the effect that adding heat has on the temperature and motion/energy of the particles.
		<ol> <li>What causes pressure on the walls of the container? Explain what will happen to the pressure if the temperature is increased but the volume kept constant.</li> </ol>
		4. Sketch a graph of pressure against temperature.
		5. Physics only. By considering the force on the piston from the motion of the particles, describe and explain the effect on pressure as a result of pressing down on the piston (assume mass of the gas and temperature is constant).
		6. The pressure of the gas is initially 200kPa and its volume is $0.30\text{m}^3$ Calculate the pressure when the volume is reduced to $0.12\text{m}^3$ . Use the equation $pV = constant$ and give your answer to 2 significant figures with units.
		7. <b>Physics only HT only</b> . The term work done and energy transferred are equivalent. A person pressing down on a bike pump does work on the gas. Describe and explain the effect this has on the gas.

		Energy
Book Ref.	Spec. Ref.	Atoms isotopes and ions
	CS 6.4.1.1 6.4.1.2 Triple 4.4.1.1 4.4.1.2	<ol> <li>Label the structure of the atom from A-F. Give the charge and mass of the sub atomic particles.</li> <li>State the approximate radius of an atom in meters. How much smaller is the nucleus compared to the whole atom?</li> <li>The diagrams below show how electrons can move between energy levels. Describe what is happening in each diagram.</li> </ol>
		4. Complete the table for an atom of sodium.
		Mass number
		23 Na Atomic number
		Number of electrons
		Number of neutrons
		<ul> <li>5. Describe, with the help of numbers the difference and similarities between the atoms shown below.</li> <li>12 C 13 C 6 C</li> <li>6. The carbon atoms above are neutral. Explain how a positive carbon ion can be produced from one of these atoms.</li> </ul>

Book Ref.	Spec.	·
11.	Ref.	Animal and plant cells
	4.1.1.2	Key information:  Most animal cells have the following parts: a nucleus, cytoplasm, a cell membrane, mitochondria to carry out aerobic respiration which releases energy for the cell, ribosomes to carry out protein synthesis by joining many amino acids.  In addition to the parts found in animal cells, plant cells often have: • chloroplasts filled with chlorophyll to absorb light for photosynthesis • a permanent vacuole filled with cell sap to provide support to the cell  Plant and algal cells also have a cell wall made of cellulose, which strengthens the cell.  1. Label the cells:
		2. Fill in the table with the functions of each organelle.
		Organelle Function
		Nucleus
		Cytoplasm
		Cell membrane
		Mitochondria
		Ribosomes
		Chloroplasts
		Vacuole
		Cell wall
		Identify three organelles found in plant cells but not animal cells.  Prove It!
		Living organisms are made of cells.
		Animal and plant cells have several parts. Each part has a different function.
		Draw one line from each cell part to the correct function of that part.
		Cell part Function
		Where most energy is released in respiration
		Cell membrane  Controls the movement of substances into and
		out of the cell  Mitochondria
		Controls the activities of the cell
		Nucleus
		Where proteins are made
		(3)

Calculate the real size of the nerve cell, giving your answer in metres and standard form.</li> </ol>					

			Cells and systems		
Book Ref.	Spec. Ref.		Cell specialis	sation	
Rei.	4.1.1.3	• sperm cells, ne	ecialised to carry out a particul rve cells and muscle cells in an xylem and phloem cells in plan	nimals	
		NAME	PICTURE	STRUCTURE	FUNCTION
		PHLOEM CELLS	cytoplasm   cell   nucleus   membrane	Has a large surface area because of a long finger-like projection	Allows electrical impulses to pass around the body
		ROOT HAIR CELL	Coll mornhere Call wall Vaccole Vaccole  Floor half Cytosplater  Flooriese	Has a long flagella and lots of mitochondria	Transports water and mineral ions around a plant
		NERVE CELL	Born plan	Has a long axon and a cell body found in the CNS	Fertilises an egg cell
		SPERM CELL		Consists of long hollow tubes strengthened with lignin	Absorbs water for a plant
		XYLEM CELLS	States from the state of the st	Consists of long hollow tubes	Transports dissolved sugars around a plant
		MUSCLE CELLS	Make of Make o	Have hairs on the tops of cells to increase surface area	Control movement of the skeleton in animals
		CILIATED CELLS		Have lots of mitochondria to release extra energy	Absorb nutrients from the small intestine
			Prove It		
		2. Describe	how the structure of a sperm of how the structure of a root haif how the structure of a nerve of	ir cell relates to its func	tion.

		Cells and systems
Book Ref.	Spec. Ref.	Cell differentiation
	4.1.1.4	<ul> <li>Key information: As an organism develops, cells differentiate to form different types of cells.</li> <li>Most types of animal cell differentiate at an early stage.</li> <li>Many types of plant cells can differentiate throughout life.</li> <li>In mature animals, cell division is mainly restricted to repair and replacement. As a cell differentiates it gets different sub-cellular structures so it can carry out a certain function. It has become a specialised cell.</li> </ul>
		State what is meant by the term 'differentiation'.
		2. <b>Describe</b> why cell division is important for animals.
		3. <b>Give</b> one example of a specialised cell and outline how it is specialised to carry out its function.
		State the name of the tissue in plants which allows plant cells to differentiate throughout life.
		Prove It!  (b) Cells can be specialised for a particular job.
		(b) Cells can be specialised for a particular job.  The diagram shows the structure of a human sperm cell.  Mitochondria  Long tail
		Describe how the long tail and the mitochondria help the sperm to do its job.  Long tail.
		Mitochondria.
		(4)

		Cells and systems
Book Ref.	Spec. Ref.	Diffusion
	4.1.3.1	Diffusion is the spreading out of the particles of any substance in solution, or particles of a gas, resulting in a net movement from an area of higher concentration to an area of lower concentration.
		1. <b>Define</b> the term 'diffusion'.
		Give two examples of molecules which diffuse in and out of cells. Name the process these molecules are involved in.
		3. <b>State</b> three factors that affect the rate of diffusion.
		Describe the relationship between surface area: volume ratio and the rate of diffusion.
		<ol> <li>Complete the table to show how the following are adapted for exchanging materials.</li> </ol>
		Organ How it is adapted for exchange
		Lungs
		Small
		intestine
		Gills
		Leaves
		Roots
		Prove It!
		Diffusion is an important process in animals and plants.
		The movement of many substances into and out of cells occurs by diffusion.
		Describe why diffusion is important to animals and plants.
		In your answer you should refer to:
		animals
		• plants
		examples of the diffusion of named substances.
		(6)

		Cells and systems
Book Ref.	Spec. Ref.	Osmosis
	4.1.3.2	Key information: Water may move across cell membranes via osmosis. Osmosis is the diffusion of water from a dilute solution to a concentrated solution through a partially permeable membrane.
		Define the term 'osmosis'.  2.  The information shows the percentage concentration of sugar solution in cells P, Q and R.  Diagram 2
		Cell P sugar solution  2% sugar solution  Cell Q  Water can move from cell to cell.  Into which cell, P, Q or R, will water move the fastest?
		Prove It!
		Plant roots absorb water from the soil by osmosis.  (a) What is osmosis?  (3)
		(b) The image below shows part of a plant root.  The plant root is adapted for absorbing water from the soil.
		Use information from the diagram to explain how this plant root is adapted for absorbing water.  (3)

	T	Cells and systems
Book Ref.	Spec. Ref.	Active transport
	4.1.3.3	<ul> <li>Key information: <ul> <li>Active transport moves substances from a more dilute solution to a more concentrated solution (against a concentration gradient). This requires energy from respiration.</li> <li>Active transport allows mineral ions to be absorbed into plant root hairs from very dilute solutions in the soil. Plants require ions for healthy growth. It also allows sugar molecules to be absorbed from lower concentrations in the gut into the blood which has a higher sugar concentration. Sugar molecules are used for cell respiration.</li> </ul> </li> </ul>
		Outline the main differences between diffusion and active transport.
		2. <b>Explain,</b> using examples, the importance of active transport for plant growth.
		3. <b>Explain</b> why active transport cannot occur in the absence of oxygen.
		4. <b>Describe</b> when active transport is used by the cells lining the small intestine.
		Prove It!
		Plants must use active transport to move some substances from the soil into root hair cells.
		(i) Active transport needs energy.
		Which part of the cell releases most of this energy?
		Tick (✔) one box. mitochondria
		nucleus
		ribosome
		(1)
		(ii) Explain why active transport is necessary in root hair cells.
		(2)
		(2)

		Cells and systems
Book Ref.	Spec. Ref.	Principles of organisation
	4.2.1	Key information: Cells are the basic building blocks of all organisms. A tissue is a group of cells with a similar structure and function. Organs are aggregations of tissues performing specific functions. Organs are organised into organ systems, which work together to form organisms.
		Put the following in order of size (smallest to largest):     Tissue Organ Cell Organ system
	MS 1c	>>
		2. <b>Describe</b> the difference between a tissue and an organ.
		3. <b>Name</b> the three tissues of the stomach. Give the function of each.
		4. <b>Give an example</b> of a plant organ and state its function.
		Prove It!
		(a) Use words from the box to complete the list of these structures in order of size.    Organs
		(b) List A gives three tissues found in the human body. List B gives four functions of tissues.  Draw a straight line from each tissue in List A to its correct function in List B.
		List A – Tissue List B – Function
		Covers many parts of the body
		Muscular tissue  Contracts to cause movement
		Glandular tissue
		Divides by melosis
		Epithelial tissue
		Releases hormones or enzymes (3)
	]	72

		Cells and systems
Book Ref.	Spec. Ref.	The heart and blood vessels
	4.2.2.2	<ul> <li>Key information: <ul> <li>The heart is an organ that pumps blood around the body in a double circulatory system. The right ventricle pumps blood to the lungs where gas exchange takes place. The left ventricle pumps blood around the rest of the body.</li> <li>The natural resting heart rate is controlled by a group of cells located in the right atrium that act as a pacemaker. Artificial pacemakers are electrical devices used to correct irregularities.</li> <li>The three different types of blood vessel are arteries, veins and capillaries.</li> </ul> </li> </ul>
		1. Label the diagram of the heart  2. Describe the passage of blood through the left hand side of the heart.  3. Explain the importance of valves in the heart.  4. Name the artery that supplies the heart with blood. Explain the importance of the heart having its own blood supply.
		<ul> <li>5. Where are the group of cells that control the natural resting heart rate found?</li> <li>6. Outline the difference in the structure of arteries and veins.</li> <li>7. Describe how the structure of a capillary relates to its function.</li> </ul>
		Prove It!
		The circulatory system contains arteries and veins.
		(a) (i) Describe how the structure of an artery is different from the structure of a vein.
		(2)

		3(3)

		Cells and systems			
Book Ref.	Spec. Ref.	Plant tissues			
KCI.	4.2.3.1	Key information:  - Plant tissues include epidermal tissues, palisade mesophyll, spongy mesophyll, xylem and phloem, and meristem tissue.  - The lead is a plant organ which is adapted in order to carry out photosynthesis.			
		1. Identify the structures in the cross-sectional diagram of the leaf.  A = B = C = D = E =  2. Describe two ways in which the leaf is adapted for photosynthesis.  3. Describe the structure and function of a xylem vessel.  4. Describe the structure and function of a phloem vessel.			
		Prove It!			
		The diagram shows a section through a plant leaf.  (a) Use words from the box to name two tissues in the leaf that transport substances around the plant.  (b) Gases diffuse between the leaf and the surrounding air.  (c) What is diffusion?			
		(2)  (ii) Name one gas that will diffuse from point A to point B on the diagram on a sunny day.  (1)  (Total 4 marks)			

		Cells and systems
Book	Spec.	Plant organ systems
Ref.	Ref.	
	4.2.3.2	Key information:  Transpiration occurs due to the evaporation of water vapour from the leaves. It is the movement of water from the roots to the atmosphere via the xylem and leaves.  Xylem vessels and hollow tubes strengthened by lignin. Their role is to transport water in the transpiration stream.  Phloem tissue is made up of long cells with pores in their ends. Dissolved sugars (sucrose) travel from the leaves to the rest of the plant for immediate use (in respiration) or for storage. The movement of sugar through the phloem tissue is called translocation.
		1. Label the plant with the plant organs.
		2. <b>Describe</b> the passage of water through the plant.
		3. <b>Explain</b> how the structure of the root hair cell is adapted to its function.
		<ul> <li>4. Plants living in very hot areas have very few stomata on the underside of the leaf. Explain why.</li> <li>5. Describe the difference in the structure and function of phloem and xylem vessels.</li> </ul>
		Complete the table to show the effects of changing conditions on rate of transpiration:
		Condition Change Effect on Rate of Transpiration
		Increased temperature
		Decreased humidity  Decreased air movement
		Increased light intensity
		Prove It!
		Describe how water moves from roots to the leaves.
		(2)

		Cells and systems
Book Ref.	Spec. Ref.	Photosynthesis – the reaction
	4.4.1.1	<ul> <li>Key information: <ul> <li>Photosynthesis is an endothermic reaction in which energy is transferred from the environment to the chloroplasts by light to produce glucose.</li> </ul> </li> <li>Write the word and symbol equation for photosynthesis.</li> </ul>
		Explain why photosynthesis only occurs during the day.
		3. <b>Explain</b> why photosynthesis is described as an endothermic reaction.
		4. <b>Describe</b> how a leaf is adapted in order to carry out photosynthesis.
		Decree III
		Prove It!
		(a) The equation describes the process of photosynthesis.
		carbon dioxide + + light energy
		(i) Write in the names of the <b>two</b> missing substances. (2)
		(ii) Name the green substance which absorbs the light energy.
		(1)
		(b) (i) In bright sunlight, the concentration of carbon dioxide in the air can limit the rate of photosynthesis. Explain what this means.
		(2)
		(ii) Give one environmental factor, other than light intensity and carbon dioxide concentration, which can limit the rate of photosynthesis.
		(1) (Total 6 marks)

		Cells and systems
Book Ref.	Spec. Ref.	The rate of photosynthesis
	4.4.1.2	Key information:  - The rate of photosynthesis can be limited by a number of different factors.
		Name four factors which limit the rate of photosynthesis.
		2. The sketch graph shows the effect of carbon dioxide on photosynthesis.  Describe and explain the shape of the graph.  Carbon dioxide concentration
		3. <b>Explain</b> the effect of temperature on the rate of photosynthesis.
		Prove It!
		The rate of photosynthesis in a plant depends on several factors in the environment. These factors include light intensity and the availability of water.
		Describe and explain the effects of two other factors that affect the rate of photosynthesis.
		You may include one or more sketch graphs in your answer.
		(5)

		Cells and systems
Book Ref.	Spec. Ref.	The rate of photosynthesis (HIGHER TIER ONLY)
	4.4.1.2	<ul> <li>Key information: <ul> <li>Farmers and gardeners use their knowledge of limiting factors to design greenhouses which increase the rate of photosynthesis in plants to ensure profits.</li> <li>The intensity of light at different distances from a light source can be described by the inverse square law. This states that the intensity of light is inversely proportional to the square of the distance from the source.</li> </ul> </li> <li>Give the equation which links light intensity and distance. State the unit for light</li> </ul>
	MS 3a, 3d	intensity.
		2. Describe and explain the shape of the graph below.  The graph shows how the rate of photosynthesis is affected by different conditions.  4% CO <sub>2</sub> at 19°C  10.03% CO <sub>2</sub> at 25°C  Light intensity  3. Describe how greenhouses are designed to ensure gardeners are able to maximise their profits.
		Prove It!
		Plants are grown in glasshouses to protect them from the weather or extend the growing season.
		Plants make food by photosynthesis.
		6CO <sub>2</sub> + 6H <sub>2</sub> O energy from C <sub>6</sub> H <sub>12</sub> O <sub>6</sub> + 6O <sub>2</sub>
		light glucose  In winter, when days are shorter, glasshouses are heated to keep the enzyme reactions in
		plants at optimum rates.  What else should a grower do to make sure that the plants are photosynthesising at the optimum rate? Give a reason for your answer.
		(Total 3 marks)

		Cells and systems
Book Ref.	Spec. Ref.	Required practical 5 (biology: required practical 6): Investigating the effect of light intensity on the rate of photosynthesis using an aquatic organism such as pondweed.
	4.4.1.2	<ol> <li>Name the equipment needed for this experiment.</li> </ol>
	AT 1, 2, 3, 4, 5	<ol> <li>Describe how to change the light intensity. Identify the piece of equipment needed to record light intensity.</li> </ol>
	W\$2.2	<ol> <li>Identify the dependent variable in this investigation. Suggest how this is measured.</li> </ol>
		<ol> <li>Name two control variables. Describe how you would ensure these variables are kept constant.</li> </ol>
		5. How are the dependent variable and one of the control variables used to calculate rate?
		Prove It!
		A student investigated the effect of temperature on the rate of photosynthesis in pondweed.
		The diagram shows the way the experiment was set up.
		Thermometer ———————————————————————————————————
		(i) The student needed to control some variables to make the investigation fair.
		State <b>two</b> variables the student needed to control in this investigation.
		1
		2(2)
		(ii) The bubbles of gas are only produced while photosynthesis is taking place.
		What <b>two</b> measurements would the student make to calculate the rate of photosynthesis?
		1
		2
		(2)

		Cells and systems				
Book Ref.	Spec. Ref.	Uses of glucose from photosynthesis				
		Key information:				
	4.4.1.3	<ul> <li>The glucose produced in photosynthesis is required by plants for a number of processes. It is often converted into different molecules required for plant survival.</li> </ul>				
		- Plants require nitrate ions from the soil in order to produce proteins.				
		1. <b>State</b> five uses of glucose.				
		2. <b>Explain</b> why glucose is stored as starch.				
		3. <b>Explain</b> why a seed needs a store of fats/oils for growth.				
		4. <b>Name</b> the molecules necessary to synthesise proteins.				
		Prove It!				
		Green plants can make glucose.				
		(a) Plants need energy to make glucose.				
		How do plants get this energy?				
		(2)				
		(b) Plants can use the glucose they have made to supply them with energy.				
		Give <b>four</b> other ways in which plants use the glucose they have made.				
		(4)				
		(Total 6 marks)				

	Cells and systems			
Book Ref.	Spec. Ref.	Aerobic and anaerobic respiration		
	4.4.2.1	<ul> <li>Key information: <ul> <li>Cellular respiration is an exothermic reaction which is continuously occurring living cells.</li> <li>Respiration releases the energy needed for living processes.</li> <li>Anaerobic respiration in yeast is also known as fermentation.</li> </ul> </li> </ul>	ıin	
		<ol> <li>Write a word and balanced symbol equation for aerobic respiration.</li> <li>Compare the processes of aerobic and anaerobic respiration. Give at least three differences.</li> </ol>		
		3. <b>Outline</b> three uses of the energy released in respiration.		
		4. <b>Using equations</b> , outline the difference between anaerobic respiration in muscles and in plants/yeast.		
		5. <b>State</b> two uses of fermentation.		
		Prove It!		
		Respiration is a process which takes place in living cells. What is the purpose of respiration?	(1)	
		(i) Balance the equation for the process of respiration when oxygen is available. $C_6H_{12}O_6 \ + \qquad O_2 \ \to \qquad CO_2 \ + \qquad H_2O$	(1)	
		(ii) What is the name of the substance in the equation with the formula C <sub>6</sub> H <sub>12</sub> O <sub>6</sub> ?	(1)	
		Compare anaerobic respiration in a yeast cell with anaerobic respiration in a muscle cell.	(3)	

		Cells and systems
Book Ref.	Spec. Ref.	Response to exercise
	4.4.2.2	<ul> <li>Key information: <ul> <li>During exercise the human body reacts to the increased demand for energy.</li> <li>The heart rate, breathing rate and breath volume increase during exercise to supply the muscles with more oxygenated blood.</li> <li>If insufficient oxygen is supplied, anaerobic respiration takes place in muscles. This causes a build-up of lactic acid which causes muscles to become fatigued and stop contracting.</li> </ul> </li> <li>(HT ONLY) <ul> <li>Blood flowing through the muscles transports the lactic acid to the liver where it is converted back into glucose. Oxygen debt is the amount of extra oxygen the body needs after exercise to react with the accumulated lactic acid and remove it from the cells.</li> </ul> </li> <li>1. Explain why the heart rate must increase during exercise.</li> </ul>
		Explain why the breathing rate must increase during exercise. Suggest what happens to the volume of breath breathed in.
		3. <b>Explain</b> what causes cramp and why.
		4. <b>Describe</b> what an oxygen debt is.
		5. HT ONLY – <b>Describe</b> how lactic acid is converted into glucose.
		Prove It!
		An increased cardiac output will provide more oxygen and more glucose to the working muscles.  Explain how this helps the athlete during exercise.
		(4)

Book	Spec.	Cells and systems  Metabolism				
Ref.	Ref.	(PLEASE NOTE: This section is covered in more detail throughout the course. It is important however to appreciate how all reactions in the body are linked.)				
	4.4.2.3	<ul><li>Key information:</li><li>Metabolism is the sum of all reactions in a cell or the body.</li></ul>				
		Name a metabolic reaction that occurs in all cells.				
		<ul> <li>2. Identify the building blocks (monomers) of the following molecules:</li> <li>Carbohydrates:</li> <li>Lipids:</li> <li>Proteins:</li> </ul>				
		3. <b>Explain</b> why glucose is converted to starch in plants, and glycogen in animals.				
		4. <b>Describe</b> the structure of a lipid.				
		5. <b>Explain</b> how excess proteins are excreted.				
		Prove It!				
		Bread contains starch, protein and fat.				
		(a) Complete each sentence by choosing the correct words from the box.				
		amino acids protein				
		fat starch				
		fatty acids sugar				
		Amylase speeds up the digestion of				
		is Protease speeds up the digestion of				
		The product of this digestion is				
		(b) Why do molecules of starch, protein and fat need to be digested?				
		(2				
		(c) In which part of the digestive system does the digestion of starch begin? Draw a ring around your answer.				
		large intestine mouth small intestine stomach (1				
		(d) What do we call substances like amylase and protease which speed up chemical reactions?				
		(1)				

	1	Cell	s and systems	
Book Ref.	Spec. Ref.		Homeostasis	
	4.5.1	Key information: - Homeostasis is the regu	ulation of the conditions ins	ide a cell or organism.
		1. What 3 variables are c	ontrolled in the body by ho	omeostasis?
		2. Why do cells need opt	timum conditions?	
		3. Complete the table to	explain what each part of	the control centre does:
		Part of the control system	Example	What it does
		Receptors		
				Receive and process information from receptors
ì			Muscles or glands

		Cells and systems
Book Ref.	Spec. Ref.	Human endocrine system
	4.5.3.1	<ul> <li>Key information: <ul> <li>The endocrine system is composed of glands which secrete hormones directly into the bloodstream. The blood carries the hormone to a target organ where it produces an effect.</li> <li>The pituitary gland in the brain is a 'master gland' which secretes several hormones into the blood in response to body conditions. These hormones in turn act on other glands to stimulate other hormones to be released to bring about effects</li> </ul> </li> </ul>
		1. Identify the structures associated with the endocrine system: K: L: M: N: O: P:  2. Describe, using an example, the role of the pituitary gland.  3. Name the hormone released by: a) The testes b) The adrenal gland c) The thyroid gland 4. Compare the action of the endocrine system with the nervous system.
		Prove It!
		Glands in the body produce hormones.  (a) Use words from the box to label gland A and gland B on the diagram below.  Adrenal Pancreas Pituitary Testis Thyroid  A  (2)
		(b) Which gland produces oestrogen?

	Cells and systems				
Book Ref.	Spec. Ref.	Contraception			
		1. Complete the table to explain how each method of controlling fertility works.			
	4.5.3.5	Contraceptive Method How it works			
		Oral contraceptives (the pill)			
		Injection/Implant/Patch			
		Barrier method e.g. condoms/ diaphragms			
		Intrauterine Devices e.g. coil			
		Spermicidal agents			
		Timed abstinence			
		Surgical sterilisation e.g. vasectomy			
		2. <b>Identify</b> the methods in the table above that are hormonal contraception.			
		3. <b>Explain</b> why some people oppose the use of contraception.			
		<ol> <li>Some people choose to avoid having sexual intercourse when an egg may be in the oviduct. Evaluate this method of contraception.</li> </ol>			
		Prove It!			
		Two methods of giving contraceptive hormones to a woman are the vaginal ring and the hormone implant.  Vaginal ring			
		The vaginal ring is a flexible ring 54 mm in diameter containing hormones.			
		54 mm			
		The woman puts in and takes out the vaginal ring herself; there is no 'wrong' way to put the ring in.  Each ring is designed for one cycle of use, which is three weeks of continuous ring use, followed by one week without the ring.  About 0.3 % of women become pregnant in the first year of ring use.  4 % of women stop using the ring because of vaginal discomfort.			
		Hormone implant  A health professional puts the hormone implant under the skin of the woman's arm.			
		The implant releases contraceptive hormones for three years before the implant needs to be replaced.  The hormone implant is 100 % effective. About 2 % of women stop using the hormone implant, mainly because of irregular menstrual bleeding.			
		Evaluate the use of the vaginal ring compared with the hormone implant.			
		Remember to give a conclusion to your evaluation.			

		Cells and systems
Book Ref.	Spec. Ref.	The use of hormones to treat infertility (HT ONLY)
	4.5.3.6	Fertility drugs can be given to women to help them become pregnant naturally.     In Vitro Fertilisation (IVF) is an alternative method used by couples unable to get pregnant.
		Name the hormones in the drug given to women to help them become pregnant 'normally'.
		2. <b>Explain</b> how these drugs interact to trigger the release of an egg.
		3. <b>Describe</b> the process of IVF.
	WS1.3 WS1.4	4. Evaluate (outline the advantages of disadvantages) the use of IVF as a fertility treatment.  1. Evaluate (outline the advantages of disadvantages) the use of IVF as a fertility treatment.
		Prove It!
		The hormones FSH and LH are used in fertility treatment.
		Give the function in fertility treatment of:
		(i) FSH
		(1)
		(ii) LH.
		(1)
		In the first stage of in-vitro fertilisation (IVF), eggs from the mother are fertilised with sperm from the father.
		Describe the next stages of IVF.
		(2)

	Cells and systems				
Book Ref.	Spec. Ref.	Negative feedback (HT ONLY)			
	4.5.3.7	Key information:  - Negative feedback processes ensure internal conditions are maintained within a narrow range.			
		Name the hormone secreted by the adrenal gland.			
		2. <b>Describe</b> the effect of this hormone on heart rate. <b>Explain</b> the importance of this.			
		3. <b>Describe</b> the role of thyroxine in the human body.			
		hypothalamus  releasing hormone (TRH)  anterior pituitary  TSH  thyroid gland  4. Explain the concept of negative feedback, using thyroxine level control as an example.			
		Prove It!			
		Hyperthyroidism is caused by an overactive thyroid gland.			
		Suggest what would happen in the body of a person with hyperthyroidism.			
		(3)			

## **Genetics and Evolution Keywords**

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

		Genetics and evolution
Boo k Ref.	Spec. Ref.	Chromosomes
	4.1.2.1	Key information:  - The nucleus of a cell contains chromosomes made of DNA molecules. Each chromosome carries a large number of genes. In body cells the chromosomes are normally found in pairs.
		Order the following in terms of size (smallest to largest)     CHROMOSOME NUCLEUS GENE CELL
		2. <b>Explain</b> why we have two copies of each chromosome.
		3. State what is meant by the term 'gene'.
		4. <b>Identify</b> the two types of cell in the human body which contain half a set of chromosomes. <b>Outline</b> the importance of this.
		Prove It!
		The diagram shows a human cell and some of its contents.
		(a) Choose words from this list to label the diagrams.
		chromosome cytoplasm gene nucleus
		(iii) enlargement of part of the cell
		(b) Choose words from this list to complete the sentence.
		a body cell an egg cell a gamete a sperm cell
		In the cell above, the chromosomes are found in pairs so this cell must be

		(Total 4 marks)

	Genetics and evolution			
Book Ref.	Spec. Ref.	Mitosis and the cell cycle		
	4.1.2.2	Cells divide in a series of stages called the cell cycle. During the cell cycle, the genetic material is doubled and then divided into two genetically identical daughter cells.      Mitosis is important in the growth, repair and development of multicellular organisms.		

	Name the organelle which contains genetic material.	
	2. <b>Describe</b> what happens in the 3 phases of the cell cycle.	
	3. <b>Explain</b> why a cell needs to grow before dividing by mitosis.	
	<ul> <li>4. State the number of chromosomes in a human body cell:</li> <li>a) During stage 1 of the cell cycle:</li> <li>b) Just before mitosis:</li> <li>c) Just after mitosis:</li> </ul>	
	5. <b>Suggest</b> why a root tip can be used for observing mitosis unde	r the microscope.
	Prove It!	
	(a) How many pairs of chromosomes are there in a body cell of a human baby?	
		(1)
	(b) Place the following in order of size, starting with the smallest, by writing numbers 1 – 4 in the boxes underneath the words.	
	chromosome nucleus gene cell	
		(1)
	(c) For a baby to grow, its cells must develop in a number of ways.	
	Explain how each of the following is part of the growth process of a baby.	
	(i) Cell enlargement	
		(1)
	(ii) The process of cell division by mitosis	
		(3)

		Genetics and evolution
Book Ref.	Spec. Ref.	Stem cells
	4.1.2.3	<ul> <li>Key information: <ul> <li>A stem cell is an undifferentiated cell of an organism which is capable of giving rise to many more cells of the same type, and from which certain other cells can arise from differentiation.</li> <li>Stem cells from embryos can be cloned and made to differentiate into most different types of human cells. Stem cells from adult bone marrow can form many types of cells including blood cells. Treatment with stem cells may be able to help conditions such as diabetes and paralysis. Meristem tissue in plants can differentiate into any type of plant cell, throughout the life of a plant.</li> </ul> </li> </ul>
	WS1.3	1. <b>Define</b> the term 'stem cell'.
		<ul> <li>2. Describe the function of stem cells in:</li> <li>a) Embryos</li> <li>b) Adult animals</li> <li>c) Meristems in plants</li> </ul>
		3. <b>Describe</b> the process of therapeutic cloning using embryos.
		<ul> <li>4. Evaluate the use of embryonic stem cells for the treatment of diseases such as diabetes.</li> <li>5. Stem cells from meristems can be used to produce clones quickly and economically. Describe two uses of this technique.</li> </ul>
		Prove It!
		The diagram shows how an immature egg could be used either to produce cells to treat some human diseases or to produce a baby.  Blastocyst – a group of about 100 cells human diseases  Egg treated chemically so that it starts to divide  Blastocyst could be implanted into the mother's womb. She would later give birth  Scientists may be allowed to use this technique to produce cells to treat some human diseases, but not to produce babies.  Using information from the diagram, suggest an explanation for this.
		(4)

	Genetics and evolution				
Boo k Ref.	Spec. Ref.	Cancer			
	4.2.2. 7	<ul> <li>Key information: <ul> <li>Cancer is the result of changes in cells that lead to uncontrolled growth and division.</li> <li>Tumours can be malignant or benign.</li> <li>Both genetic factors and lifestyle choices can affect an individual's likelihood of developing cancer.</li> </ul> </li> </ul>			
		<ol> <li>What is cancer?</li> <li>Outline the difference between a benign and a malignant tumour.</li> </ol>			
		3. <b>Describe</b> how malignant tumours spread.			
		4. <b>Suggest</b> why cancer is more common in older people.			
		<ol> <li>Identify three lifestyle choices that can increase an individual's risk of developing cancer.</li> </ol>			
		Breast cancer is an example of a type of cancer that sometimes runs in families.      Suggest why.			
		Prove It!			
		The number of people in the UK with tumours is increasing.			
		(a) (i) Describe how tumours form.			
		(1)			
		(ii) Tumours can be malignant or benign.  What is the difference between a malignant tumour and a benign tumour?			
		(1)  (b) Describe how some tumours may spread to other parts of the body.			
		(1)			

		Genetics and evolution
Book Ref.	Spec. Ref.	DNA and the genome
	4.6.1.4	<ul> <li>Key information: <ul> <li>The genetic material in the nucleus is composed of a chemical called DNA. DNA is a polymer made up of two strands forming a double helix. The DNA is contained in structures called chromosomes.</li> <li>Genes code for a particular sequence of amino acids which make a specific protein.</li> <li>The genome of an organism is the entire genetic material of that organism. The whole human genome has now been studied and this will have great importance for medicine in the future.</li> </ul> </li> <li>Describe the basic structure of DNA.</li> </ul>
		<ol> <li>State the number of chromosomes in a normal human body cell.</li> <li>Define the term 'gene'. Outline what a gene codes for.</li> </ol>
		<ul><li>4. Explain the difference between a gene and a genome.</li><li>5. Name the project which took twenty years to complete and involved mapping the entire human genome.</li></ul>
		6. <b>Outline</b> the importance of understanding the human genome.  Prove It!
		Chromosomes contain molecules of DNA. Genes are small sections of DNA.  (a) Each gene contains a code.  What does a cell use this code for?
		(i) DNA fingerprints can be used to identify people. One example of the use of DNA fingerprints is to find out which man is the father of a child.  The diagram shows the DNA fingerprints of a child, the child's mother and two men who claim to be the child's father.  The numbers refer to the bars on the DNA fingerprints.  Man A Man B Child Mother  The numbers refer to the bars on the DNA fingerprints.  Man B Child Mother  The numbers refer to the bars on the DNA fingerprints.  (i) Which man, A or B, is more likely to be the father of the child?
		Use the numbers on the DNA fingerprints to explain your choice.  In your answer you should refer to all four people.
		(3)

		Genetics and evolution
Book Ref.	Spec. Ref.	Inherited disorders
	4.6.1.7	Key information: - Some disorders are caused by the inheritance of certain alleles, e.g. cystic fibrosis and polydactyly.
	MS 2d	Name a genetic disorder caused by a recessive allele. Describe the symptoms of this disorder.
		Explain why disorders caused by dominant alleles are more common than disorders caused by recessive alleles.
		3. <b>HT ONLY:</b> Construct a Punnett Square to show the possible genotypes and phenotypes of the offspring between two cystic fibrosis carriers. What is the proportion of healthy offspring to offspring with cystic fibrosis? What is the probability that their child will have cystic fibrosis?
		<ol> <li>Explain why embryos are screened for genetic disorders. Suggest reasons why some people are against the screening of embryos for polydactyly, despite it being caused by a dominant allele.</li> </ol>
		<ol> <li>Describe the role of gene therapy in reducing the number of individuals who suffer from cystic fibrosis.</li> </ol>
		Prove It!
		Cystic fibrosis is an inherited disorder that can seriously affect health.  (a) Which one of these is affected by cystic fibrosis?  Draw a ring around your answer.  blood cell membranes kidneys nervous system
		(1)  (b) The diagram shows the inheritance of cystic fibrosis in a family. The allele that produces cystic fibrosis is recessive.
		Bob Carol
		Aslice Ted
		Healthy male  Healthy female  Male with cystic fibrous:
		(i) Explain why Alice inherited cystic fibrosis.
		(ii) Explain why Ted did not inherit cystic fibrosis.
		(2)

		Genetics and evolution
Book Ref.	Spec. Ref.	Sex determination
	4.6.1.8	Key information:  - Human body cells contain a pair of chromosomes, which carry the genes that determine sex.
		State the number of chromosomes found in human body cells.
		2. A person has the genotype XX. <b>State</b> whether this person is male or female.
		<ol> <li>State the probability of a couple having a male. Carry out a genetic cross to support your answer.</li> </ol>
		Prove It!
		(a) Complete the following passage
		Chromosomes carry genetic information. Chromosomes are made up of
		twenty-two matching pairs but the final pair does not always match. It is these two
		that determine the gender, or sex, of the human. If you are a
		the final pair of chromosomes matches. If you are a
		the final pair of chromosomes does not match. (2)
		(b) Draw a labelled diagram to show that there is an equal chance of parents producing a baby boy or girl. Use the symbols <b>X</b> and <b>Y</b> for the chromosomes.
		(4) (Total 6 marks)

		Genetics and evolution
Book Ref.	Spec. Ref.	Evolution
	4.6.2.2	<ul> <li>Key information:         <ul> <li>The theory of evolution states that all species of living things have evolved from simple life forms that first developed more than three billion years ago.</li> <li>Evolution is a change in the inherited characteristics of a population over time through a process of natural selection, which may result in the formation of a new species.</li> <li>If two populations of one species become so different that they are no longer able to interbreed to produce fertile offspring, they have formed two new species.</li> </ul> </li> <li>State what is meant by the term 'evolution'.</li> </ul>
		2. <b>Describe</b> the process of evolution by natural selection.
		3. <b>Define</b> the term 'species'.
		Orangutans 4. The diagram shows an evolutionary tree. <b>Identify</b> the species which is:  a) the most closely related to humans.
		Humans b) the most distantly related to humans.
		Chimpanzees
		Prove It!
		The diagram shows the evolution of a group called the primates.
		Lemur Tansier Monkey Monkey Orangutan Chimpanzee Human Gorilla Gibbon
		(a) Which primate evolved first?
		(1)
		(b) Name two primates that developed most recently from the same common ancestor as humans.  1
		2(2)
		(c) (i) The theory of evolution by natural selection was suggested in the 1800s.  Which scientist suggested this theory?
		(ii) Use words from the box to complete the passage about natural selection.
		evolution environment generation
		mutate survive variation
		Individual organisms of a species may show a wide range of
		because of differences in their genes.
		Individuals with characteristics most suited to the
		are more likely to
		The genes that have helped these individuals to survive are then passed on to
		the next

	T _	Genetics and evolution	
Book Ref.	Spec. Ref.	Selective breeding	
	4.6.2.3	<ul> <li>Key information:         <ul> <li>Selective breeding is the process by which humans breed plants and animals particular genetic characteristics. Humans have been doing this for thousands years since they first bred food crops from wild plants and domesticated anim</li> <li>Selective breeding can lead to 'inbreeding', where some breeds are particular prone to disease or inherited defects.</li> </ul> </li> </ul>	s of nals.
		<ol> <li>Give three uses of selective breeding.</li> </ol>	
		Describe why selective breeding is known as 'artificial selection'.	
		<ol> <li>Describe the process of selective breeding. Explain why it occurs over many generations.</li> </ol>	
		<ol> <li>Pedigree dogs are often selectively bred. Outline the advantages and disadvantages of this.</li> </ol>	
		Prove It!	
		Many different types of animals are produced using selective breeding.	
		Some cats are selectively bred so that they do not cause allergies in people.	
		(a) Suggest two other reasons why people might selectively breed cats.	
		1	
		2	
		(2)	
		(b) Selective breeding could cause problems of inbreeding in cats.	
		Describe one problem inbreeding causes.	
		(1)	
		Many people have breathing problems because they are allergic to cats.	
		The allergy is caused by a chemical called Fel D1.	
		Different cats produce different amounts of Fei D1.	
		A cat has been bred so that it does not produce Fel D1.	
		The cat does not cause an allergic reaction.	
		Explain how the cat has been produced using selective breeding.  (4	.)

		Interdependence
Book Ref.	Spec. Ref.	How materials are cycled
	4.7.2.2	<ul> <li>Key information: <ul> <li>The carbon cycle returns carbon from organisms to the atmosphere as carbon dioxide to be used by plants in photosynthesis.</li> <li>The water cycle provides fresh water for plants and animals on land before draining into the seas. Water is continuously evaporated and precipitated.</li> <li>Microorganisms cycle materials through an ecosystem through the process of decay. As the microorganisms respire, they release the carbon trapped in materials as carbon dioxide into the atmosphere. At the same time, mineral ions are released to the soil.</li> </ul> </li> </ul>
		Give an example of a material that is cycled through an ecosystem.
		<ol> <li>Name the process plants carry out which converts carbon dioxide into organic compounds (glucose). Outline three uses of this glucose in plants.</li> </ol>
		<ol> <li>Name the process carried out by animals and plants that releases carbon dioxide back into the atmosphere.</li> </ol>
		4. <b>Describe</b> the role of micro-organisms in the cycling of nutrients.
		Prove It!
		Some of the leaves from the gardener's strawberry plant die.
		The dead leaves fall off the strawberry plant onto the ground.
		The carbon in the dead leaves is recycled through the carbon cycle.
		Explain how the carbon is recycled into the growth of new leaves.
		(6)

		Interdependence
Book Ref.	Spec. Ref.	Biodiversity
	4.7.3.1	<ul> <li>Key information: <ul> <li>Biodiversity is the variety of all the different species of organisms on Earth, or within an ecosystem.</li> <li>A great biodiversity ensures the stability of ecosystems by increasing the availability of food and shelter for organisms.</li> <li>Many human activities, such as deforestation, are reducing biodiversity. Only recently have measures been taken to try and stop this reduction. One way is carbon sequestration.</li> </ul> </li> </ul>
	WS 1.4	<ol> <li>Define the term 'biodiversity'.</li> <li>Suggest why deforestation causes a reduction in biodiversity. Explain the negative impact of this to human populations.</li> </ol>
		3. <b>Outline</b> one way in which carbon can be 'sequestered'. Give a reason why carbon sequestration is important.
		Prove It!
		Deforestation affects the environment in many ways.
		(a) Deforestation increases the amount of carbon dioxide in the atmosphere.  Give <b>two</b> reasons why.  1
		(2)  (b) Deforestation also results in a loss of biodiversity.
		(i) What is meant by biodiversity?
		(ii) Give <b>two</b> reasons why it is important to prevent organisms becoming extinct.  1
		(2) (Total 5 marks)

		Interdependence			
Book Ref.	Spec. Ref.	Waste management			
	4.7.3.2	<ul> <li>Key information:         <ul> <li>Rapid growth in the human population and an increase in the standard of living mean that increasingly more resources are used and more waste is produced.</li> <li>Pollution kills plants and animals which can reduce biodiversity.</li> <li>Water pollution can occur from sewage, fertiliser or toxic chemicals.</li> <li>Air pollution can occur from smoke and acidic gases.</li> <li>Land pollution can occur from landfill and from toxic chemicals.</li> </ul> </li> </ul>			
		Describe why pollution can result in a loss of biodiversity.			
		2. <b>Name</b> two human activities which result in air pollution.			
		<ol> <li>Sewage reduces the concentration of oxygen in water. Explain why this results in a loss of biodiversity.</li> </ol>			
		<ul><li>4. Suggest how we can reduce the amount of land pollution.</li><li>5. Explain why waste management is becoming more important.</li></ul>			
		Prove It!			
		The diagram shows a village and its surroundings.  woodland  village  grassland  village  river  industrial site			
		(a) Use words from the list to complete the sentences about pollution.			
		oxygen pesticides sewage sulphur dioxide  The air might be polluted by from the industrial site.  The river might be polluted by from the village and by from the farmland.			
		(b) The owners of the quarry want to make it larger.			
		Give one effect that this might have on wild plants and animals that live near the quarry.			
		(1) (Total 4 marks)			

		Interdependence
Book Ref.	Spec. Ref.	Land use
Ref.	WS 1.4, 1.5	<ul> <li>Key information: <ul> <li>Humans reduce the amount of land available for other animals and plants by building, quarrying, farming and dumping waste.</li> <li>Peat bogs are wetland areas made up of partially decomposing material. Peat is used as garden compost because it contains a high concentration of mineral ions. The destruction of peat bogs results in a loss of biodiversity.</li> <li>The decay or burning of peat releases carbon dioxide into the environment.</li> </ul> </li> <li>1. Identify four ways in which humans reduce the amount of land available for other animals and plants.</li> <li>2. Explain why farmers often use peat as a fertiliser.</li> <li>3. Describe why the burning of peat contributes to global warming.</li> <li>4. Evaluate (consider the reasons for and against) the use of peat as a fertiliser for growing crops.</li> </ul>
		Maths skills
	WS 3.5	Human activities have many effects on our ecosystem.  The graph shows the volume of peat compost and peat-free compost used in gardening from
		1999 to 2009.  4000 3500 2500 2500 Volume used in thousands of m <sup>3</sup> 1500 1000 1000 1999 2001 2003 2005 2007 2009 Year
		(a) Describe the trends shown in the graph.
		(b) What effect does the destruction of peat bogs have on the gases in the atmosphere?
		(1)

	Interdependence
Spec. Ref.	Deforestation
4.7.3.4	
	Key information:  - Large-scale deforestation in tropical areas has occurred in order to provide land for cattle and rice fields, and grow crops for biofuel.
WS 1.4	Describe why deforestation has occurred in tropical areas.
	Evaluate (consider the reasons for and against) the carrying out of large-scale deforestation in order to provide land for cattle and rice fields.
	3. <b>Explain</b> , using your knowledge of the carbon cycle, why deforestation affects the composition of atmospheric gases.
	Prove It!
	Clearing forests and replacing the forests with palm oil trees to produce fuel for motor
	vehicles will affect the composition of the atmosphere.
	Explain how.

	2. <b>Suggest</b> a hypothesis for the experiment outlined above.
	3. Identify 3 possible sources of error in the experiment and identify how you would control or monitor them.
	Ref. 4.2.2.1 AT1,2,5,8 WS2.1 WS2.2

	_	Microbes and Health					
Book Ref.	Spec. Ref.	Coronary heart disease: a non-communicable disease					
	4.2.2.4	<ol> <li>Describe what has happened inside the body of someone who has coronary heart disease.</li> </ol>					
		<ol><li>Describe the consequence of a person having a faulty valve and the methods used to treat it.</li></ol>					
		3. Complete the table to summarise some treatments for CHD:					
		Treatment Description of treatment When it is used					
		Statins					
		Stents					
		Mechanical or biological valves					
		Transplant					
		Prove It!					
		Explain how the build-up of fatty material can damage the heart.					
		Describe how statins can help to reduce deaths from CHD.					

	•	Microbes and Health	
Book Ref.	Spec. Ref.	Health Issues and the effect of lifestyle on some non-communicable diseases	
	4.2.2.5	State 3 lifestyle factors that can affect both mental and physical health.	
	4.2.2.6	2. Which type of pathogen, living in cells, can be a trigger for cancer?	
		3. What can immune reactions (originally caused by a pathogen) be a trigger for?	
		4. What mental illness can severe physical health problems cause?	
		5. What physical problems can smoking cause?	
		6. Which organs does drinking alcohol affect the most?	
		Maths Skills	
	MS2c MS4a	(b) Predicted early death is the number of years that a person will die before the mean age of death for the whole population. The predicted early death of a person is affected by their body mass.	
		Scientists have calculated the effect of body mass on predicted early death.	
		The graph shows the results of the scientists' calculations.	
		Predicted early death 10-in years  5-	
		0.7 0.8 0.9 1.0 1.1 1.2 1.3 1.4 1.5  Number of times below Number of times above	
		ideal body mass ideal body mass	
		Ideal body mass	
		The number of times above or below ideal body mass is given by the equation:  Actual body mass	
		In the UK the mean age of death for women is 82.	
		A woman has a body mass of 70 kg. The woman's ideal body mass is 56 kg.	
		(i) Use the information from the graph to predict the age of this woman when she dies.	
		Age at death = years	(2)

		Microbes and Health
Book Ref.	Spec. Ref.	Cancer
	4.2.2.7	Describe what is happening to cells in someone with cancer.
		2. What is a benign tumour?
		3. How are malignant tumours different to benign tumours?
		4. <b>Suggest</b> three factors that are linked with an increased risk of getting cancer.
		Prove It!
		(b) Why can cancers grow very large?
		Tick one box.
		Cancer cells are specialised
		Cell division is slow
		Cell division is uncontrolled
		(c) Give one factor which increases the risk of getting cancer.
		(g) Suggest two reasons why the survival rates for all cancers have increased.
		2

		Microbes and Health
Book Ref.	Spec. Ref.	Communicable Diseases
	4.3.1.1	Key information:  - Pathogens are microorganisms that can cause disease. They can infect plants or animals and can be spread by direct contact, water or air.
		1. Define the term 'pathogen'.
		2. <b>State</b> the names of the 4 types of pathogen.
		3. <b>Suggest</b> 2 ways the spread of disease can be reduced or prevented.
		4. How do bacteria make you feel ill?
		5. How do viruses make you feel ill?
		Prove it!
		1. a) What causes infectious diseases? (1)
		a) How do pathogens make you feel ill? (2)
		2. a) Give two ways in which diseases are spread from one person to another. (2)
		b) Give two ways in which diseases are spread from one plant to another. (2)
		c) For each method given in part a) and part b), explain how the pathogens are passed from one organism to another. (4)

Book	Microbes and Health  Spec. Vival and Bastorial Diseases									
Ref.	Ref.			Viral	and Bact	erial Diseases	5

			Microbes and Health						
Book Ref.	Spec. Ref.		Human Defence Systems						
Kei.	ete the table to summarise the defence systems of the human body:  How it defends against pathogens  ethe 3 ways which white blood cells defend the body against ens.								
		Some parts of Look at Figu	Prove It!  of the human body have adaptations to reduce the entry of live pathogens.  re 1.  Figure 1						
		Explain how	the trachea is adapted to reduce the entry of live pathogens.						
		Explain now	(3)						

	Microbes and Health
Book Spec. Ref. Ref.	Vaccination
Rei. Rei.	Key information:
4.3.1.7	<ul> <li>Spread of pathogens can be reduced by vaccinating a large amount of the population.</li> <li>A vaccine prevents an individual becoming infected with and spreading a specific pathogen.</li> <li>Vaccinations work by introducing small amounts of dead/inactive pathogens into the body causing the white blood cells to respond.</li> <li>What does a vaccination contain?</li> <li>Describe how a vaccination protects a person from becoming infected by a specific pathogen.</li> <li>Evaluate the idea that it should be compulsory for all parents to get their child vaccinated.</li> </ul>
	Prove It!
	(ii) A few weeks after the vaccination, the child becomes infected with measles viruses from another person.  The graph shows the number of measles antibodies in the child's blood from before the vaccination until after the infection.  Infection  More measles antibodies are produced after the infection than after the vaccination.  Describe other differences in antibody production after infection compared with after vaccination. (3)  2. Vaccination against measles will not protect a child against rubella. Why? (1)  3. What is the advantage of protecting a large proportion of the population

	Microbes and Health					
Book Ref.	Spec. Ref.	Antibiotics and Painkillers				
	4.3.1.8	1. What is an antibiotic? Give an example.				
		2. Why are doctors being encouraged to reduce the amount of antibiotics they are prescribing?				
		3. Why can antibiotics not be used to treat the flu?				
		4. Why is it difficult to create a drug that kills the flu?				
		5. What is a painkiller? How is it different to an antibiotic?				
		Prove It!				
		Antibiotics are used to treat bacterial infections, but not viral infections.				
		(a) Explain why antibiotics are <b>not</b> effective against viral infections.				
		(b) New strains of bacteria have developed that are resistant to antibiotics. There is no effective treatment against these resistant strains.				
		What must be done to make sure we will be able to treat bacterial infections in the future?				
		(2)

		Particles and Bonding
Book Ref.	Spec. Ref.	The Development of the Model of the Atom
	CS 5.1.1.3	<ol> <li>Which model describes the atom as s a ball of positive charge with negative electrons embedded in it?</li> </ol>
	Triple 4.1.1.3	<ol><li>Name the experiment which led scientists to believe the mass of an atom was mostly in the centre.</li></ol>
	W\$1.1 W\$1.2	3. What evidence led them to believe there was a positive nucleus?
		4. What was the name of the model resulting from the experiment above?
		5. How did Niels Bohr improve the nuclear model?
		6. Which scientist provided evidence to show the nucleus contained neutrons as well as protons?
		Prove It!
		In 1911 the scientists Geiger and Marsden investigated the effect of firing alpha particles at very thin sheets of gold foil.
		Their experiment is shown in Figure 2. The arrows show the paths taken by alpha particles in the experiment.
		Figure 2
		Alpha source  Thin gold sheet
		(a) Explain why scientists replaced the plum pudding model of the atom with the nuclear model of the atom as a result of the experiment.
		(4)

	Particles and Bonding			
Book Ref.	Spec. Ref.	Properties of Ionic Compounds		
Kei.	CS 5.2.2.3	What causes a substance to have a high melting point or boiling point?		
Triple 4.2.2.3  2. What enables a substance to con-		2. What enables a substance to conduct electricity?		
		3. Do giant ionic substances have high or low melting points? Explain why.		
		4. Do giant ionic substances conduct electricity? Explain your answer.		
		Prove It!  The diagram shows the structure of potassium iodide.		
		Potassium ion (K*)  — lodide ion (I <sup>-</sup> )		
		Explain why a high temperature is needed to melt potassium iodide.		
		Solid sodium iodide does not conduct electricity.  Why does sodium indide solution conduct electricity?		
		Why does sodium iodide solution conduct electricity?		
		(1)		

	Particles and Bonding				
Book Ref.	Spec. Ref.	Properties of Small Molecules			
	CS 5.2.2.4 Triple	Give an example of a simple molecular substance.			
	4.2.2.4  2. Do giant molecular substances have high or low melting points? Ex				
		3. Why does C2H6 have a lower melting point than C5H12?			
		4. Do simple molecular substances conduct electricity? Explain your answer.			
		Prove It!			
		Why is hydrogen chloride a gas at room temperature (20 °C)?			
		Tick (✓) two boxes.			
		Hydrogen chloride has a low boiling point.			
		Hydrogen chloride has a high melting point.			
		Hydrogen chloride is made of simple molecules.			
		Hydrogen chloride does not conduct electricity.			
		Hydrogen chloride has a giant structure.			

	Particles and Bonding				
Book Ref.	Spec. Ref.	Polymers			
KCI.	CS 5.2.2.5	1. Give one example of a polymer.			
	Triple 4.2.2.5	2. What are polymer chains made of?			
	4.2.2.0	3. What sort of bonding is present in polymers?			
		4. Why do polymers have high melting points?			
		5. Draw the repeating unit for this monomer.  H  C=C  H  H			
		6. Draw the following polymer as a monomer.  F F C C C I N F F F F I N F F F F I N F F F F F I N F F F F			
		Prove It!			
		(i) Poly(ethene) is often used for packaging. Poly(ethene) is made from ethene.			
		Ethene is an alkene with the chemical formula C <sub>2</sub> H <sub>4</sub>			
		Draw the displayed structure for ethene.	(1)		
		(ii) Poly(ethene) is formed from ethene in a polymerisation reaction.			
		Describe, in terms of molecules, what happens in a polymerisation reaction.			
			(3)		

		Particles and Bonding
Book Ref.	Spec. Ref.	Giant Covalent Structures
CS 5.2.2.6 Triple 4.2.2.6  1. State the names of the 3 giant structures below?  (structure continues indefinitely)  strong		• silicon continues
		2. Name the strong bonds that link the atoms in the diagrams above?
		3. Do the structures above have high or low melting points? Explain your answer.
		Prove It!
		The structures above and the simple molecular substances both contain the same type of bonding but the structures above are solid at room temperature whereas the simple molecular substances are mostly liquids or gases at room temperature. Explain this difference.
		(6)

	Particles and Bonding					
Book Ref.	Spec. Ref.	Properties of Metals				
Non-	CS 5.2.2.7 5.2.2.8 Triple	Why do metals have high melting and boiling points?				
4.2.2.7 4.2.2.8 2. Draw a diagram to show the structure of a pure metal and another diagram show the structure of an alloy. Label the diagram.		Draw a diagram to show the structure of a pure metal and another diagram to show the structure of an alloy. Label the diagram.				
		3. Using your diagrams above, explain why alloys are harder than pure metals.				
		4. Why are metals good conductors of heat?				
		5. Do metals conduct electricity? Explain your answer.				
		Prove It!				
		Explain why titanium conducts electricity.				
		(3)				

	Particles and Bonding				
Book Ref.	Spec. Ref.	Diamond and Graphite			
	CS 5.2.3.1 5.2.3.2	1. Staet 3 properties of diamond.			
	Triple 4.2.3.1 4.2.3.2	2. Explain how the structure and bonding of diamond leads to these properties.			
	MS5b	3. Describe the structure of graphite.			
		4. Explain why graphite is able to conduct electricity but diamond is not.			
		5. Explain why graphite is soft.			
		Prove It!			
		The diagrams show the structures of diamond and graphite.			
		Diamond Graphite			
		(a) Diamond and graphite both contain the same element.			
		What is the name of this element?			
		(b) Use the diagrams above and your knowledge of structure and bonding to explain why:			
		- Graphite is very soft.			
		<ul><li>Diamond is very hard.</li><li>Graphite conducts electricity. (6)</li></ul>			

		Particles and Bonding				
Book Ref.	Spec. Ref.	Graphene and Fullerenes				
	CS 5.2.3.3	What is graphene? What is it used for?				
	Triple 4.2.3.3	2. Name 3 properties of graphene.				
	WS1.4	3. What is a fullerene?				
		4. Which element makes up fullerenes? What shape rings do they form? How many atoms are in each ring?				
		5. What was the name of the first fullerene to be discovered?				
		6. What is a nanotube?				
		7. Describe the structure of a nanotube.				
		8. What properties do nanotubes have?				
		9. Why are nanotubes useful?				
		Prove It!				
		Carbon nanotubes are cylindrical fullerenes.				
		Explain the properties of carbon nanotubes.				
		Answer in terms of structure and bonding.				
		(Total 6 marks)				

		Particles and Bonding					
Book Ref.	Spec. Ref.	Crude Oil and Alkanes					
Kei.	CS 5.7.1.1	What is crude oil made up of?					
	Triple 4.7.1.1	2. Define the term hydrocarbon?					
	WS1.2 MS5b	3. How was crude oil formed?					
		4. What is the general fo	rmula for an alkane?				
		5. Complete the table b	elow:				
		Name	Molecular Formula	Structural Formula

## **Quantitative Chemistry Keywords**

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

		Quantitative Chemistry
Book Ref.	Spec. Ref.	Conservation of Mass and RFM
Kei.	CS 5.3.1.1 5.3.1.2	<ol> <li>In a reaction, why does the mass of reactants always equal the mass of products?</li> </ol>
	Triple 4.3.1.1 4.3.1.2	<ul> <li>2. In the equation: 2Li + F₂ → 2LiF</li> <li>a) What does the 2 in front of LiF mean?</li> <li>b) What does the ₂ mean in F₂?</li> </ul>
		3. Explain why the following equation needs to be balanced: $2H_2 + O_2 \rightarrow 2H_2O$
		Prove It!
		The chemical equation for the reaction of titanium(IV) chloride with sodium is:
		TiCl₄ + 4Na → Ti + 4NaCl
		titanium(IV) chloride + sodium → titanium + sodium chloride
		For one reaction:
		1615 kg titanium(IV) chloride reacted completely with 782 kg sodium     1989 kg sodium chloride was produced.  Calculate the mass of titanium produced from this reaction.
		Mass of titanium =kg  The figure below represents a molecule of paracetamol.
		н-с-с-о-н
		Give the molecular formula of paracetamol.
		Calculate its relative formula mass $(M_{\rm r})$ .
		Maths Skills
		Calculate the relative formula mass of the following compounds:  a) H <sub>2</sub> b) H <sub>2</sub> O c) CaCl <sub>2</sub> d) CO <sub>2</sub> e) CaCO <sub>3</sub>
		f) Ca(OH) <sub>2</sub>

	1	Quantitative Chemistry
Book Ref.	Spec. Ref.	Mass Change and Chemical Measurements
	CS 5.3.1.3 5.3.1.4 Triple 3.3.1.3 3.3.1.4	<ol> <li>In a reaction, the mass of the products must always equal the mass of the reactant. However if a gas is involved in can often look like the mass has gone up or down.</li> <li>a) Give an example of a reaction where it appears the mass of the product is greater than the reactant.</li> </ol>
	W\$3.4 W\$3.7	b) Give an example of a reaction where it appears the mass of the reactant greater than the product.
		2. Give 2 reasons why a set of results will contain uncertainty.
		<ol> <li>If you have higher uncertainty in your results, does that mean they are more or less precise? Why?</li> </ol>
		Prove It!  A student heated 5g of calcium in an unsealed test tube so that it reacted with oxyge At the end of the reaction, the mass of the product inside the test tube was 7g. Explain this observation.
		The student repeated the experiment twice more and found the mass of the product was 7.1g and 6.8g for these experiments. Calculate the uncertainty and suggest what might have caused it.
		Maths Skills
		Maths Skills  Calculate the uncertainty for the following sets of data:
		Calculate the uncertainty for the following sets of data:  Repeat 1 Repeat 2 Repeat 3 Mean Uncertainty
		Calculate the uncertainty for the following sets of data:    Repeat 1   Repeat 2   Repeat 3   Mean   Uncertainty
		Calculate the uncertainty for the following sets of data:    Repeat 1   Repeat 2   Repeat 3   Mean   Uncertainty
		Calculate the uncertainty for the following sets of data:    Repeat 1   Repeat 2   Repeat 3   Mean   Uncertainty

		Quantitative Chemistry
Book Ref.	Spec. Ref.	Moles
	CS 5.3.2.1 (HT	<ol> <li>What is the mass of 1 mole of a substance in grams equal to?</li> </ol>
	only) Triple	2. What is the equation that links number of moles, mass and relative formula mass?
	4.3.2.1 (HT only)	3. What is the name of the constant that tells us the number of atoms, particles, molecules or ions in a mole of any given substance? What is the value of this constant?
		4. How would you calculate the number of molecules present in a substance if you were given the mass of the substance?
		Prove It!
		Calculate the <b>number of molecules</b> in 14 g of carbon dioxide.
		Give your answer in standard form.
		Relative atomic masses $(A_r)$ : C = 14; O = 16
		Answer = molecules (4)
	MS3b MS3c	Maths Skills
	141300	Complete the following mole calculations using the equation you wrote above:  a) How many moles are there in 42g of carbon?  b) How many moles are there in 66g of carbon dioxide?  c) What is the mass in g of 0.80 moles of sulfuric acid (H <sub>2</sub> SO <sub>4</sub> )?  d) What is the mass in g of 1.6 moles of ammonia (NH <sub>3</sub> )?  e) Prove that the relative formula mass of NaCl is 58.5 if you know that you have 23.4g in 0.4 moles.

		Quantitative Chemistry
Book Ref.	Spec. Ref.	Amount of Substance
NOT.	CS 5.3.2.2 (HT only)	<ol> <li>In the following equation, how many moles of magnesium are reacting with how many moles of hydrochloric acid? Mg + 2HCl → MgCl<sub>2</sub> + H<sub>2</sub></li> </ol>
	Triple 4.3.2.2	
	(HT	Prove It!
	only)	Iron(III) chloride can be produced by the reaction shown in the equation:
		2 Fe + 3 $Cl_2 \rightarrow 2 FeCl_3$
		<ul> <li>(i) Calculate the maximum mass of iron(III) chloride (FeCl<sub>3</sub>) that can be produced from 11.20 g of iron.</li> </ul>
		Relative atomic masses (A <sub>r</sub> ): CI = 35.5; Fe = 56.
		Maximum mass of iron(III) chloride = g (3)
	MS3b MS3c	<ul> <li>Maths Skills</li> <li>1) How many moles of water are formed if 2 moles of methane combust completely in oxygen?</li> <li>CH<sub>4</sub> + 2O<sub>2</sub> → CO<sub>2</sub> + 2H<sub>2</sub>O</li> </ul>
		2) What mass of calcium chloride is produced when 3.7g of calcium hydroxide reacts with an excess of hydrochloric acid? Ca(OH) <sub>2</sub> + 2 HCl → CaCl <sub>2</sub> + 2 H <sub>2</sub> O
		3) What is the mass of aluminium oxide produced when 135g of aluminium is burned in air? 4Al + 3O <sub>2</sub> → 2Al <sub>2</sub> O <sub>3</sub>
		4) How much zinc carbonate would need to decompose to form 24.2g of zinc oxide? ZnCO <sub>3</sub> → ZnO + CO <sub>2</sub>

		Quantitative Chemistry
Book Ref.	Spec. Ref.	Maths Skills (Ralancing Equations Using Moles)
кет.	CS	(Balancing Equations Using Moles)  1. 8.1g of zinc oxide reacts completely with 0.60g of carbon to form 2.2g of carbon
	5.3.2.3 (HT	dioxide and 6.5g of zinc. Balance the symbol equation below.
	only)	$ZnO + C \rightarrow CO_2 + Zn$
	Triple 4.3.2.3 (HT only)	
		2. Potassium nitrate (KNO <sub>3</sub> ) decomposes on heating to give potassium nitrite (KNO <sub>2</sub> ) and oxygen (O <sub>2</sub> ). When 4.04 g of KNO <sub>3</sub> is heated, 3.40 g of KNO <sub>2</sub> is produced. Write a balanced equation for this reaction.
		<ol> <li>2.7g of an element, X, reacts completely with 2.4g of oxygen to form 5.1g of an oxide, X oxide. Write a balanced equation for this reaction.</li> </ol>
		4. Iron(III) oxide (Fe <sub>2</sub> O <sub>3</sub> ) is reduced by carbon on heating to give iron metal (Fe) and carbon dioxide (CO <sub>2</sub> ). When 480 g of Fe <sub>2</sub> O <sub>3</sub> is heated with carbon, 336 g of Fe and 198 g of CO <sub>2</sub> are produced. Write a balanced equation for this reaction.

		Quantitative Chemistry
Book Ref.	Spec. Ref.	Limiting Reactants and Concentration of Solutions
No.	CS 5.3.2.4 (HT only)	<ol> <li>Why do chemical reactions sometimes stop? For example, when you add magnesium to acid it eventually stops fizzing.</li> </ol>
	Triple 4.3.2.4 (HT	2. What is a limiting reactant? Why is it called this?
	only)	3. In the example in question 1, which reactant is usually in excess, acid or metal, and which is the limiting reactant?
		<ol> <li>Does the limiting reactant or the reactant in excess determine how much product can be formed? Explain your answer.</li> </ol>
		5. When 2.24g of iron were reacted with an excess of copper sulfate solution, 2.54g of copper were produced. How much copper would be produced if 6.72g of iron were reacted in an excess of copper sulfate solution?
		6. What is the equation that links concentration, mass of solute and volume of solution?
		7. If the mass is measured in grams and the volume in dm³, what are the units of concentration?
		8. If you increase the mass of solute in a solution, what happens to the concentration?
	CS 5.3.2.5	Maths Skills (Concentration)
	Triple 4.3.2.5	1. What is 2300cm³ in dm³?
	4.5.2.5 MS3b	2. What is the concentration of a solution of sodium chloride solution that is made by dissolving 30g of sodium chloride in 0.20dm <sup>3</sup> of water?
	M\$3c W\$4.5	3. What is the concentration in g/dm³ of a solution of iron chloride solution that is made by dissolving 10g of iron chloride in 25cm³ of water?
		4. What is the mass of copper chloride in 20cm³ of an 80g/dm³ solution of copper chloride?

## Trends and Patterns Keywords

Add all the important keywords for this big idea in the grid below as you come across them in the study pack.

Word	Definition

	Triple	2. What do you call the substance being electrolysed?
	4.4.3.1 4.4.3.2	
		3. What type of bonding is present in compounds that can be electrolysed? What must happen to these compounds before they can be electrolysed?
		4. What is the name given to the negative electrode? What is the name given to the positive electrode?
		5. Explain which type of ion moves to the positive electrode and what happens to that ion.
		6. Predict the product formed at the cathode and anode when molten lead bromide (PbBr <sub>2</sub> ) is electrolysed. Describe what you would observe at each electrode.
		7. Solid ionic substances do not conduct electricity. Explain why they can conduct when molten or in aqueous solution, but not when solid.
		Prove It!
		Sodium chloride is an ionic compound. It contains sodium ions, Na+, and chloride ions, Cl When <b>molten</b> sodium chloride is electrolysed, sodium metal and chlorine gas are formed. Describe how the sodium ions and chloride ions in solid sodium chloride are converted into sodium and chlorine by electrolysis.
		(6)

		Trends and Patterns
Book Ref.	Spec. Ref.	Electrolysis of Aluminium Oxide
Kei.	CS	
	5.4.3.3	Why would you use electrolysis to obtain the metal from sodium chloride but not from zinc chloride?
	5.4.3.5 (HT)	
	Triple 4.4.3.3	2. Why is aluminium oxide dissolved in molten cryolite before being electrolysed?
	4.4.3.5 (HT)	3. Why are the carbon anodes regularly replaced in the industrial electrolysis of aluminium oxide?
		4. (HT only) Write half equations for the changes at each electrode in the electrolysis of molten aluminium oxide. Identify each reaction as either reduction or oxidation.
		5. Explain why the extraction of aluminium requites so much energy
		Prove It!
		The flow chart shows the main steps in the extraction of aluminium from aluminium ore. Aluminium is recycled by melting scrap aluminium at 700 °C. Use your own knowledge and the information given to answer. Suggest why most aluminium is recycled.
		Aluminium oxide is separated from bauxite ore.
		Aluminium oxide is purified.
		Aluminium oxide is mixed with cryolite.
		The mixture is heated to 950 °C to melt it.
		Aluminium is extracted by electrolysis.

		e) Calculate the mean rate of the reaction up to the time the reaction is complete. Give your answer to 3 significant figures. (4)	
		f) Determine the rate of reaction at 150 seconds. Show your working on the graph above. Give your answer in standard form (4)	

		Physical Chemistry
Book Ref.	Spec. Ref.	Collision Theory and Activation Energy
	CS 5.6.1.3	Use the collision theory to explain why only some collisions result in a chemical reaction.
	Triple 4.6.1.3	2. Define the term activation energy.
		3. How do the following affect the rate of reaction in terms of increasing frequency of collisions:  a) Increase in pressure
		b) Increase in surface area
		c) Decrease in concentration
		d) Use of a catalyst
		4. Explain <b>2 reasons</b> why increasing the temperature increases the rate of reaction.
		5. What is the relationship between the size of pieces of solid material and its surface area to volume ratio?
	MS5c	Maths skills
	MS1d	In an investigation of the reaction between zinc and dilute sulfuric acid, a student compared the rates of reaction by measuring the time taken for a set volume of hydrogen gas (250cm³) to be given of. The student tested 2 different sized zinc granules and then zinc pellets of equal mass. The granules took 225s to disappear and the pellets took 113s
		Calculate the mean rate of reaction with the granules and with the pellets.     Include units.
		Estimate how much larger the surface area to volume ratio is for the pellets compared to the granules.
		3. Imagine the granules were cubes with sides of 0.1mm. Calculate the surface area, the volume and the surface area to volume ratio for 1 granule of zinc.

		Physical Chemistry
Book	Spec.	Required practical 11 (CS)
Ref.	Ref.	Required practical 5 (Triple)  Investigate how changes in concentration affect the rates of reaction by a method
	5.6.1.2	involving the volume of a gas produced and a method involving a change in colour or turbidity.
	Triple 4.6.1.2	What does the term 'turbidity' mean? How could you use this to measure a rate of reaction for a give chemical change?
	AT 1,3,5 and 6	Suggest another method of measuring the rate of reaction that involves a gas syringe.
	WS2.2	
		3. A student investigated the rate of reaction of magnesium and hydrochloric acid.
		$Mg(s) + 2HCl(aq) \longrightarrow MgCl_2(aq) + H_2(g)$
		The student studied the effect of changing the concentration of the hydrochloric acid.
		She measured the time for the magnesium to stop reacting.
		Concentration of 0.5 1.0 1.5 2.0
		Concentration of 0.5 1.0 1.5 2.0 hydrochloric acid in moles per dm <sup>3</sup>
		(a) The student changed the concentration of the hydrochloric acid.
		Give <b>two</b> variables that the student should control.
		1
		2
		(b) (i) The rate of reaction increased as the concentration of hydrochloric acid increased. Explain why.
		(2)  (ii) Evolgin why increasing the temperature would increase the rate of regation
		(ii) Explain why increasing the temperature would increase the rate of reaction.  (3)

		Physical Chemistry
Book Ref.	Spec. Ref.	Rate of reaction
	CS 5.6.1.4	1. What is a catalyst?
	Triple 4.6.1.4	2. How does a catalyst affect the rate of a chemical reaction? How does it do this?
		3. Why is a catalyst not included in the reactants of a word equation for a reaction?
		4. What are enzymes?
		5. Draw a reaction profile for an endothermic reaction showing the activation energy with a catalyst and without a catalyst.
		6. Explain catalytic action in terms of activation energy.
		· ·
		Prove it!
		Nitrogen and hydrogen are passed over iron to produce ammonia in the Haber Process.
		Balance the equation for the reaction.
		$N_2 + H_2 \rightarrow NH_3$
		(1)
		What is iron used for in the Haber process?
		Tick one box.
		fuel
		monomer
		reactant

### **Graph drawing**

Top tips for getting full marks in graph-drawing questions:

- 1. Axes should be drawn in pencil.
- 2. Labels (including units!) should only be written in pen when you are sure of them.
- 3. Your scale should be even 0.1, 0.2, 0.3... or 10, 20, 30... or 100, 200, 300 .... **not** 18, 22,13.
- 4. When you draw a bar chart the bars should be of equal width.
- 5. If you draw a line graph then a line or curve of best fit should show the pattern of the points they should not be connected dot to dot.
- 6. Your graph needs to take up over half of your graph paper. If it doesn't then you should redo your scale.

### Important terms

Independent variable: this is the variable you have chosen to change. These are always drawn on the x-axis.

Dependent variable: this changes when you have changed the independent variable. It depends on the independent variable. **These are always drawn on the y-axis.** 

Categoric variable: this is the names of groups such as eye colour or type of energy resource. You draw a **bar chart** to represent this type of variable.

Continuous variable: this is data such as temperature or time which can be any value. You draw a **line graph** to represent this type of variable.

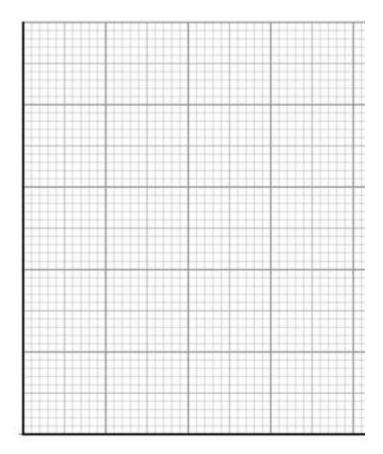

### **Graph drawing practice**

### 1. Bar chart

A student carried out a survey to find out the blood group of each student in Year 11. He calculated the % of students in each blood group, as shown in the table below.

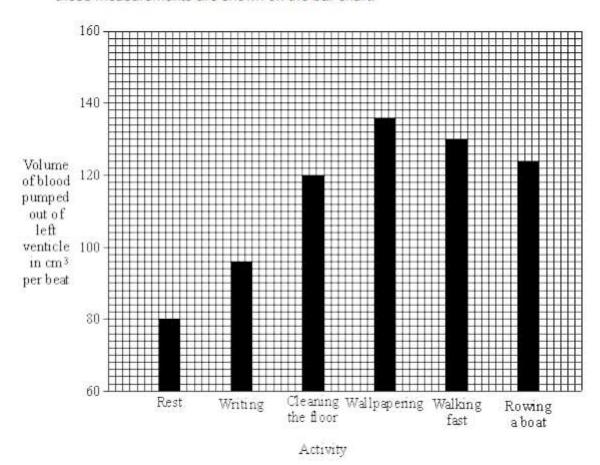

Blood group	% students
Α	41
В	9
AB	4
0	46

Plot a bar graph of the data shown above.

(a) The volume of blood pumped out of the left ventricle at each beat was measured for a person during six different activities. These activities showed an increasing energy demand, with rest requiring the least energy and rowing a boat the most. The results of these measurements are shown on the bar chart.

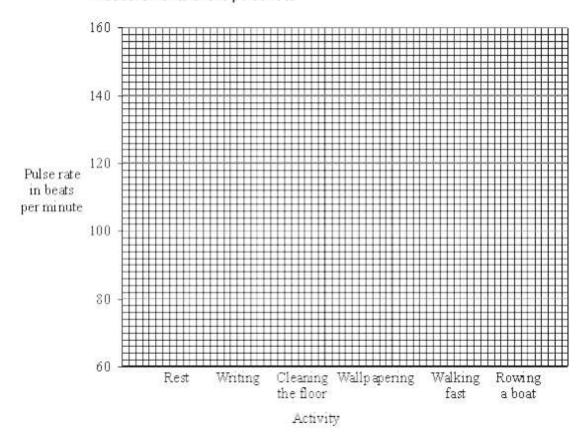

(i) The pulse rate was also measured for the person during the same activities. The table shows the results that were obtained.

Activity	Pulse rate in beats per minute		
Rest	70		
Writing	85		
Cleaning the floor	100		
Wallpapering	120		
Walking fast	132		
Rowing a boat	153		

On the graph paper below draw a bar chart of the results obtained for the measurements of the pulse rate.

(ii) Undertaking activities with increasing energy demand has an effect on the volume of blood pumped from the left ventricle (per beat) and on the pulse rate. What do the bar charts show these effects to be? Use only information shown in the bar charts in your answer.

(b) The pulse rate changed when the activity changed. Explain the reason for this.

(Total 6 marks)

(2)

(2)

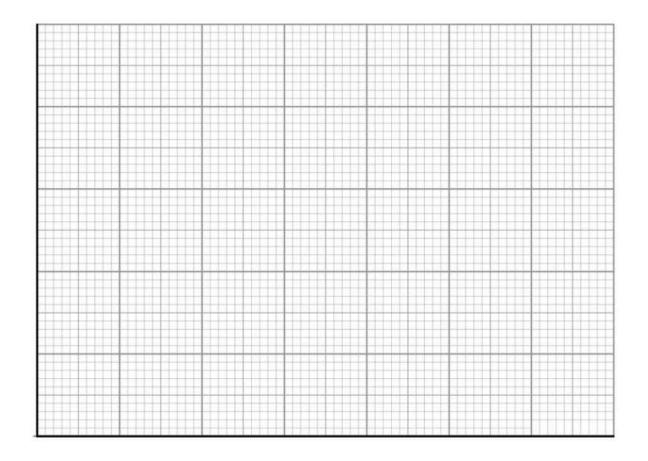

### 2. Line graph

A student investigated the effect of temperature on the rate of photosynthesis.

Her results are shown in the table below.

Temperature in °C	Number of bubbles produced in one minute
5	7
10	15
15	21
20	24
25	24

Draw a line graph of the data shown above.

(a) (i) What name is given to an enzyme which catalyses the breakdown of protein?

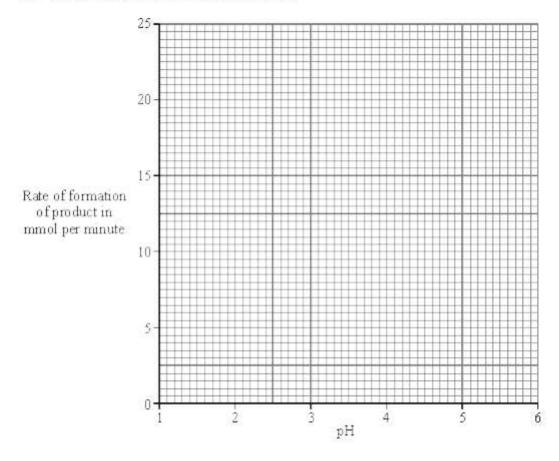

(ii) What product is formed when protein is broken down by the enzyme?

(1)

The table shows the effect of pH on the activity of an enzyme which catalyses the breakdown of protein.

рН	1.0	2.0	3.0	4.0	5.0
Rate of formation of product in mmol per minute	10.5	23.0	10.5	2.5	0.0

- (b) Draw a graph of the data in the table.
- (b) Draw a graph of the data in the table.

	The enzyme is produced by the human digestive system.	(c)
(1)	(i) At what pH does this enzyme work best?	
	(ii) Suggest which part of the digestive system produces this enzyme.	
(1)		
	Why is it necessary to break down proteins in the digestive system?	(d)
(3) I 10 marks)	(Total	
o marks)	(100	

### 3. Pie chart

The table below shows the world energy demand and sources of energy in 2013.

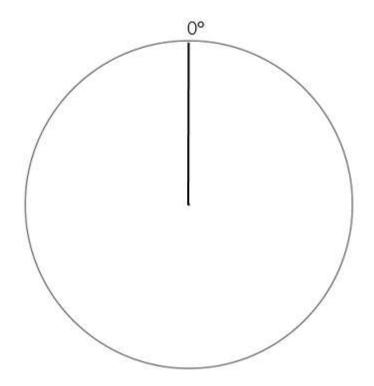

Energy source	%	Calculation	Degrees of a circle (°)
Coal	31	(31/ <sub>100</sub> ) x 360	112
Gas	24		
Oil	31		
Nuclear	4		
Hydroelectricity	7		
Other renewables	3		

Draw a pie chart of the data shown above.

Help! How do I work out the size of each part of the pie chart?

- To draw a pie chart, we need to represent each part of the data as a proportion of 360, because there are 360 degrees in a circle.
- For example, if 31% of world energy demand comes from coal, we will represent this on the circle as a segment with an angle of:  $(^{31}/_{100}) \times 360 = 111.6$ , or  $112^{\circ}$ .
- Complete the additional columns of the table shown in red above.
- Once you have done this, check that all the values you have calculated add up to 360°!

Now draw your pie chart!

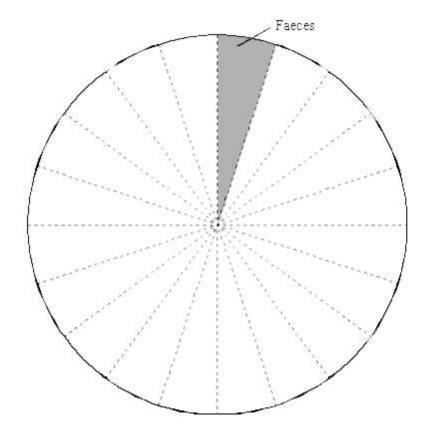

The table shows how much water is lost in different ways from a student's body.

Way in which water is lost	Percentage of total
Breath	15
Faeces	5
Sweat	50
Urine	30

### (a) Complete the pie chart.

One part has been done for you. Remember to label the pie chart.
